# Chapter 1. Product Introduction

-1-

## 1.1 Package Contents

Thank you for choosing AirLive AirMax5x II Wireless AP. Please verify the contents inside the package box.

If there is any item missing or damaged, please contact the seller immediately.

## 1.2 Product Description

### Flexible and Reliable Outdoor Characteristics

With the passive PoE design, the AirMax5X II(outdoor wireless CPE) can be easily installed in the areas where power outlets are not available. The outdoor wireless CPE is definitely suitable for wireless IP surveillance, and bridge link of building to building and backbone of public service. Additionally, the **self-healing** capability keeps connection alive all the time. With the **IP65-rated** outdoor enclosure, the outdoor wireless CPE can perform normally under rigorous weather conditions, meaning it can be installed in any harsh, outdoor environments

### Designed for Various Requirements

The outdoor wireless CPE is specially designed for long-distance outdoor surveillance and wireless backhaul solutions that are capable of establishing stable bridge connection through the embedded antenna. To provide maximum performance, the outdoor wireless CPE can implement up to AP/Repeater operation modes where a multitude of applications in communities, warehouses, campuses, harbors, etc. can be made.

#### Point to multiple point

IP Camera ---- Wireless Bridge      Wireless Bridge ---- DVR ---- Monitoring PC

#### Point to Point

IP Camera --Switch --Wireless Bridge      Wireless Bridge--- DVR ---Monitoring PC

### Multiple SSIDs with VLAN Tagging

The outdoor wireless CPE supports WPA/WPA2, and the 802.1X RADIUS authentication to secure the wireless connection. Besides, the supported IEEE 802.1Q VLAN allows multiple VLAN tags to be mapped to multiple SSIDs to distinguish the wireless access. This makes it possible for the outdoor wireless CPE to work with managed Ethernet switches to have VLANs assigned to a different access level and authority.

### 3 Simple Steps to Set Up Point to Point/Point to Multi-Point

Without needing to enter the Web interface for configuration, the outdoor wireless CPE needs three simple steps to establish the PtP/PtMP connection without any difficulty. By just clicking the **Pair** button on the AirMax5X II and within 2 minutes, you can connect two AirMax5X IIs without complicated configuration.

### Optimized Efficiency in AP Management

The brand-new GUI configuration wizard helps the system administrator easily set up the outdoor wireless CPE step by step. Besides, the built-in Wi-Fi analyzer provides real-time channel utilization to prevent channel overlapping to assure greater performance. With the automatic transmission power mechanism, distance control and scheduling reboot setting, the outdoor wireless CPE is easier for the administrator to deploy and manage without on-site maintenance. Moreover, you can simply use AirLive AP Controller, to deliver wireless profiles to multiple APs simultaneously, thus making the central management simple.

## 1.3 Product Features

- **Industrial Compliant Wireless LAN and LAN**
  - Compliant with the IEEE 802.11b/g/n and IEEE 802.11a/n wireless technology
  - 2T2R architecture with data rate of up to 300Mbps
  - Equipped with two 10/100Mbps RJ45 ports with auto MDI/MDI-X supported
- **Fixed Network Broadband Router**
  - Supported WAN connection types: DHCP, Static IP, PPPoE
  - Supports Port Forwarding and DMZ for various networking applications
  - Supports DHCP server
- **RF Interface Characteristics**
  - Built-in 14dBi dual-polarization antenna (AirMax5X II)
  - Built-in 10dBi dual-polarization antenna (AirMax2X II)
- **Outdoor Environmental Characteristics**
  - IP65 rating
  - Passive PoE 48VDC inject
  - Operating temperature: -20~70 degrees C
- **Multiple Operation Modes and Wireless Features**
  - Multiple operation modes: AP, Repeater
  - WMM (Wi-Fi multimedia) provides higher priority to multimedia transmitting over wireless
  - Coverage threshold to limit the weak signal of clients occupying session
  - Real-time Wi-Fi channel analysis chart and client limit control for better performance
- **Secure Network Connection**
  - Full encryption supported: WPA/WPA2, WPA-PSK/WPA2-PSK and 802.1X RADIUS authentication
  - Supports 802.1Q VLAN and SSID-to-VLAN mapping
  - Supports IP/Port/MAC address/URL filtering, DoS, SPI Firewall
  - Supports DMZ and Port Forwarding
  - Bandwidth control per IP address to increase network stability
- **Easy Installation and Management**
  - 3 simple steps to establish WDS connection easily
  - Supports AirLive AP Controllers in AP mode
  - Self-healing mechanism through system auto reboot setting
  - System status monitoring through remote Syslog Server

## 1.4 Product Specifications

Model Name	AirMax2 II			AirMax5X II		
Description	AirMax5X II: 5.8GHz 802.11n 300Mbps Outdoor Wireless CPE AirMax2N: 2.4GHz 802.11n 300Mbps Outdoor Wireless CPE					
Hardware Features						
Interfaces	Wireless IEEE802.11 a/n, 2T2R			Wireless IEEE 802.11a/b/n, 2T2R		
	PoE: 1 x 10/100BASE-TX, auto-MDI/MDIX, Passive PoE PD LAN: 1x 10/100BASE-TX, auto-MDI/MDIX					
Antennas	Built-in 8dBi directional antenna with dual polarization			Built-in 14dBi directional antenna with dual polarization		
Button	Reset/Pair button, WiFi Mode Switch					
Dimensions	26.19*8.82*5.82 cm					
Weight	405g					
Power Requirements	48V Passive PoE					
Power Consumption	< 13W					
Wireless Interface Specifications						
Standard	IEEE 802.11b/g/n IEEE 802.11i IEEE 802.3 10BASE-T IEEE 802.3u 100BASE-TX IEEE 802.3x flow control			IEEE 802.11a/n IEEE 802.11i IEEE 802.3 10BASE-T IEEE 802.3u 100BASE-TX IEEE 802.3x flow control		
Media Access Control	CSMA/CA					
Modulation	802.11b/g/n: OFDM (BPSK/ QPSK/ 16QAM/ 64QAM) 802.11b: DSSS (DBPSK/ DQPSK/ CCK)			802.11a/n: OFDM (BPSK/ QPSK/ 16QAM/ 64QAM)		
Frequency Band	FCC: 2.412~2.462GHz ETSI: 2.412~2.472GHz			FCC: 5.180~5.240GHz, 5.745~5.825GHz ETSI: 5.180~5.700GHz		
Operating Channels	FCC: 1~11 Channels ETSI: 1~13 Channels			FCC: 36, 40, 44, 48, 149, 153, 157, 161, 165 (9 channels) ETSI: 36, 40, 44, 48, 100, 104, 108, 112, 116, 132, 136, 140 (16 channels)  <b>5GHz channel list will vary in different countries according to their regulations.</b>		
Max. Transmit Power (dBm)	FCC: up to 20 dBm ETSI: < 20dBm (EIRP)			FCC: up to 26dBm ETSI: < 20dBm (EIRP)		
	Network Mode	Data Rate	Receive Sensitivity (dBm)	Network Mode	Data Rate	Receive Sensitivity (dBm)

<b>Environment &amp; Certification</b>						
<b>Operating Temperature</b>	-30 ~ 70 degrees C					
<b>Operating Humidity</b>	5 ~ 95% (non-condensing)					
<b>IP Level</b>	IP65					
<b>ESD Protection</b>	± 8kV air-gap discharge ± 6kV contact discharge					
<b>Surge Protection</b>	± 4kV					
<b>Regulatory</b>	CE, RoHS					
<b>Software</b>						
<b>LAN</b>	Static IP					
	Supports IP-MAC binding					
<b>WAN Type (GW/WISP mode)</b>	<ul style="list-style-type: none"> <li>■ Static IP</li> <li>■ Dynamic IP</li> <li>■ PPPoE</li> </ul>					
<b>Wireless Modes</b>	<ul style="list-style-type: none"> <li>■ Access Point</li> <li>■ Repeater</li> </ul>					
<b>Channel Width</b>	20MHz, 40MHz					
<b>Encryption Type</b>	WPA, WPA-PSK, WPA2, WPA2-PSK, 802.1X					
<b>Wireless Security</b>	Enable/Disable SSID Broadcast					
	Wireless MAC address filtering					
	User Isolation					
<b>Max. SSIDs</b>	4					
<b>Max. Wireless Clients</b>	64 per radio					
<b>Max. WDS Peers</b>	4 (Up to 3 peers)					

<b>Wireless QoS</b>	Supports Wi-Fi Multimedia (WMM)
<b>Wireless Advanced</b>	Auto Channel Selection
	WLAN Partition
	Client Limit Control, Coverage Threshold
	Distance control (Auto Ack Timeout)
	Wi-Fi channel analysis chart
	Fast Roaming
<b>Status Monitoring</b>	Device status, wireless client List
	AirLive Smart Discovery
	DHCP client table
	System Log supports remote syslog server
<b>VLAN</b>	IEEE 802.1Q VLAN (VID: 3~4094)
	SSID-to-VLAN mapping up to 4 SSIDs
<b>Self-healing</b>	Supports auto reboot settings per day/hour
<b>Management</b>	Remote management through WEB/Telnet
	Configuration backup and restore
	Supports UPnP
	Supports IGMP Proxy
	Supports PPTP/L2TP/IPSec VPN Pass-through

## Chapter 2. Hardware Installation

### 2.1 Product Outlook

#### AirMax5X II/2X II

- **Dimensions:** 87 x 38 x 260mm

#### Front Side

Figure 2-1 AirMax5X II/2X II Front Side

#### Rear Side

Figure 2-2 AirMax5X II/2XII Rear Side

## Right Side

Figure 2-3 AirMax5X II Right Side

Figure 2-4 AirMax2X II Right Side

## LED Definition

LED	State	Meaning
Power	On	The device is powered on
	Off	The device is powered off
WAN Port	On	Port linked
	Blinking	Data is transmitting or receiving data
	Off	No link
LAN Port	On	Port linked
	Blinking	Data is transmitting or receiving data
	Off	No link
WLAN	On	The wireless radio is on
	Blinking	Data is transmitting or receiving over wireless
	Off	The wireless radio is off

## Port and Button

It provides a simple interface monitoring the AP. Figure 2-5 shows the hardware interface of the AirMax5X II/2XII.

### AirMax5X II/2XII Hardware Interface:

Figure 2-5 AirMax5X II Interface

## Hardware Description

### Hardware Interface Definition

Object	Description
PoE LAN Port	10/100Mbps RJ45 port, auto MDI/MDI-X
LAN Port	10/100Mbps RJ45 port, auto MDI/MDI-X
PtP Switch	Position " <b>Master</b> " to " <b>Slave</b> " on the AP.
Reset/Pair Button	Press and hold the <b>Reset</b> button on the device for over 15 seconds to return to the factory default setting. Press the " <b>Reset/Pair</b> " button on both APs to be connected in 2 minutes. The connection has been successfully established.

## Chapter 3. Connecting to the CPE

### 3.1 System Requirements

- Broadband Internet Access Service (Cable/xDSL/Ethernet connection)
- Passive PoE 48V(supply power to the AirMax5X II/2XII)
- PCs with a working Ethernet adapter and an Ethernet cable with RJ45 connectors
- PCs running Windows 98/ME, NT4.0, 2000/XP, Windows Vista / Win 7, MAC OS 9 or later, Linux, UNIX or other platforms compatible with **TCP/IP** protocols

Note

1. The CPE in the following instructions refers to AirLive AirMax5X II.
2. It is recommended to use Internet Explorer 11, Firefox or Chrome to access the CPE.

### 3.2 Installing the CPE

Before installing the CPE, make sure your PoE switch is connected to the Internet through the broadband service successfully at this moment. If there is any problem, please contact your local ISP.

Please install the AP according to the following steps. Don't forget to pull out the power plug and keep your hands dry.

**Step 1.** Push the latch on the bottom of the Outdoor Wireless CPE to remove the sliding cover.

Figure 3-1 Connecting the Antenna

**Step 2.** Plug the RJ45 Ethernet cable into the PoE port of the Outdoor Wireless CPE. Then, slide back the cover to finish the installation.

**Figure 3-2** Connecting the Ethernet cable

**Step 3.** Place the mounting strap through the slot on the back of the Outdoor Wireless CPE and then around the pole. Tighten the mounting strap to secure the Outdoor Wireless CPE.

**Figure 3-3** Connecting the PoE injector

## Chapter 4. Quick Installation Guide

This chapter will show you how to configure the basic functions of your CPE within minutes.

A computer with wired Ethernet connection to the Wireless CPE is required for the first-time configuration.

### 4.1 Manual Network Setup -- TCP/IP Configuration

The default IP address of the AirMax5X II is **192.168.1.253**. And the default Subnet Mask is 255.255.255.0. These values can be changed as you want. In this guide, we use all the default values for description.

Connect the AirMax5X II with your PC by an Ethernet cable plugging in LAN port on one side and in LAN port of PC on the other side. Please power on the AirMax5X II by PoE switch through the PoE port.

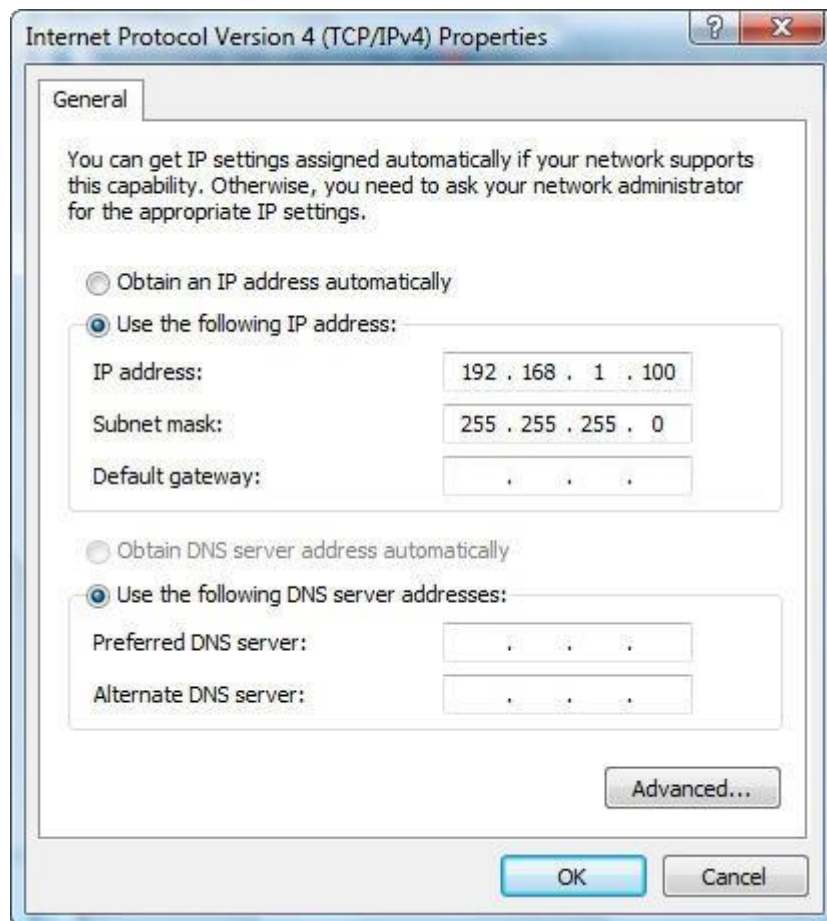

In the following sections, we'll introduce how to install and configure the TCP/IP correctly in **Windows 10**. And the procedures in other operating systems are similar. First, make sure your Ethernet Adapter is working, and refer to the Ethernet adapter manual if needed.

#### Configuring the IP Address Manually

Summary:

- Set up the TCP/IP Protocol for your PC.
  - Configure the network parameters. The IP address is 192.168.1.xxx (If the default IP address of the AirMax5X II is 192.168.1.253, and the DSL router is 192.168.1.254, the "xxx" can be configured to any number from 1 to 252.) and subnet mask is 255.255.255.0.
- 1 Select **Use the following IP address**, and then configure the IP address of the PC.
  - 2 For example, as the default IP address of the AirMax5X II is 192.168.1.253 and the DSL router is 192.168.1.254, you may choose from 192.168.1.1 to 192.168.1.252.

**Figure 4-1** TCP/IP Setting

Now click **OK** to save your settings.

Now, you can run the ping command in the **command prompt** to verify the network connection between your PC and the AP. The following example is in **Windows 10** OS. Please follow the steps below:

1. Click on **Start > Run**.
2. Type "**cmd**" in the Search box.

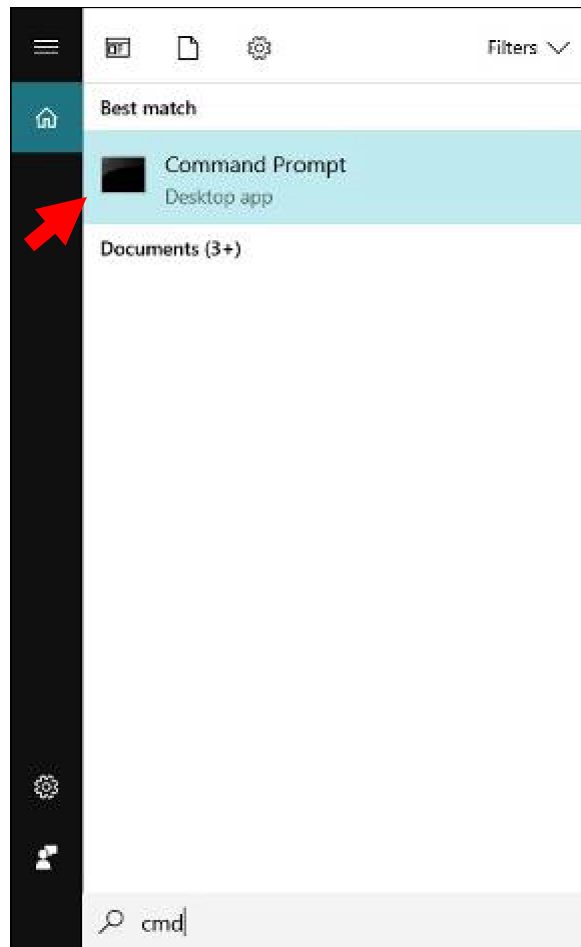

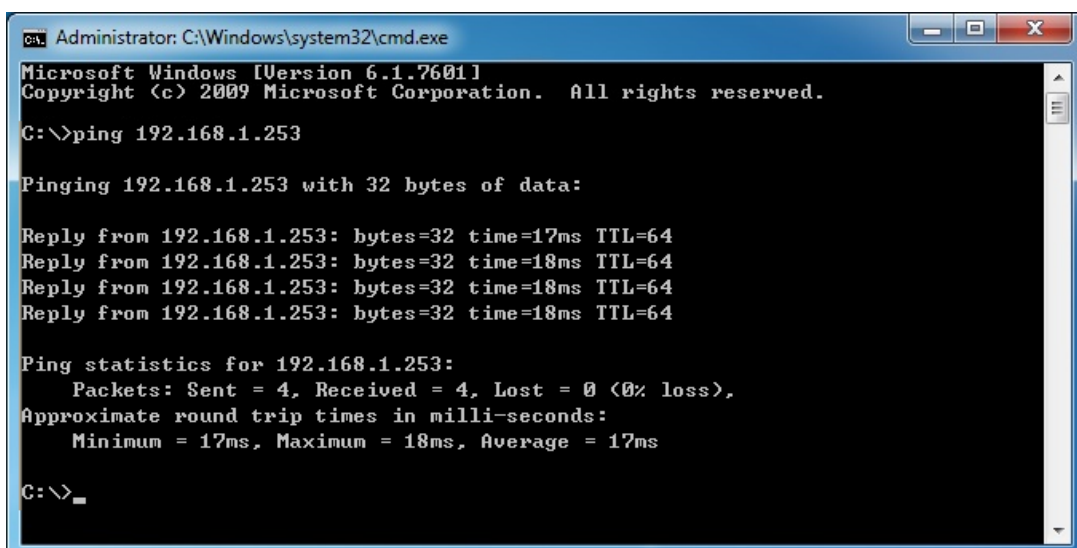

Figure 4-2 Windows Start Menu

3. Open a command prompt, type ping **192.168.1.253** and then press **Enter**.
  - ◆ If the result displayed is similar to [Figure 4-3](#), it means the connection between your PC and the AP has been established well.

A screenshot of a Windows Command Prompt window titled 'Administrator: C:\Windows\system32\cmd.exe'. The window shows the output of the 'ping 192.168.1.253' command. The output indicates a successful connection with four replies, each showing 32 bytes of data, a time of 17ms or 18ms, and a TTL of 64. The ping statistics show 4 packets sent, 4 received, and 0% loss. The prompt is currently at 'C:\>\_'.

    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

C:\Documents and Settings\user>
```

**Figure 4-4** Failed Result of Ping Command

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your AP. Some firewall software programs may block a DHCP request on newly installed adapters.

## 4.2 Starting Setup in the Web UI

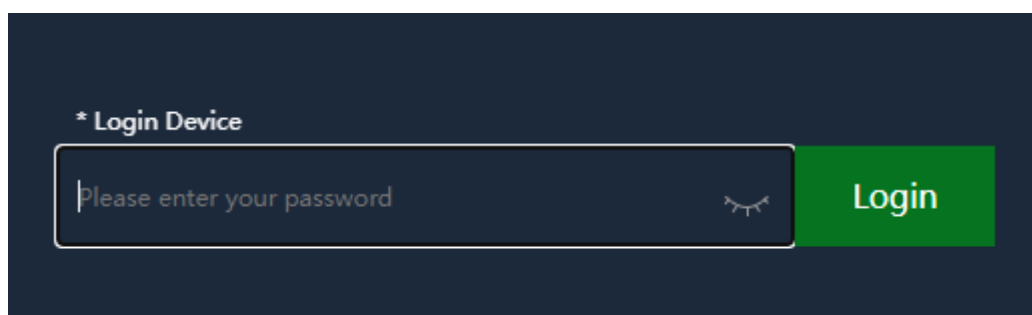

It is easy to configure and manage the CPE with the web browser.

**Step 1.** To access the configuration utility, open a web-browser and enter the default IP address <http://192.168.1.253> in the web address field of the browser.

**Figure 4-5** Login by Default IP Address

After a moment, a login window will appear. Enter **admin** for the password in lower case letters. Then click **LOGIN** or press the **Enter** key.

**Figure 4-6** Login Window

Default IP Address: **192.168.1.253**

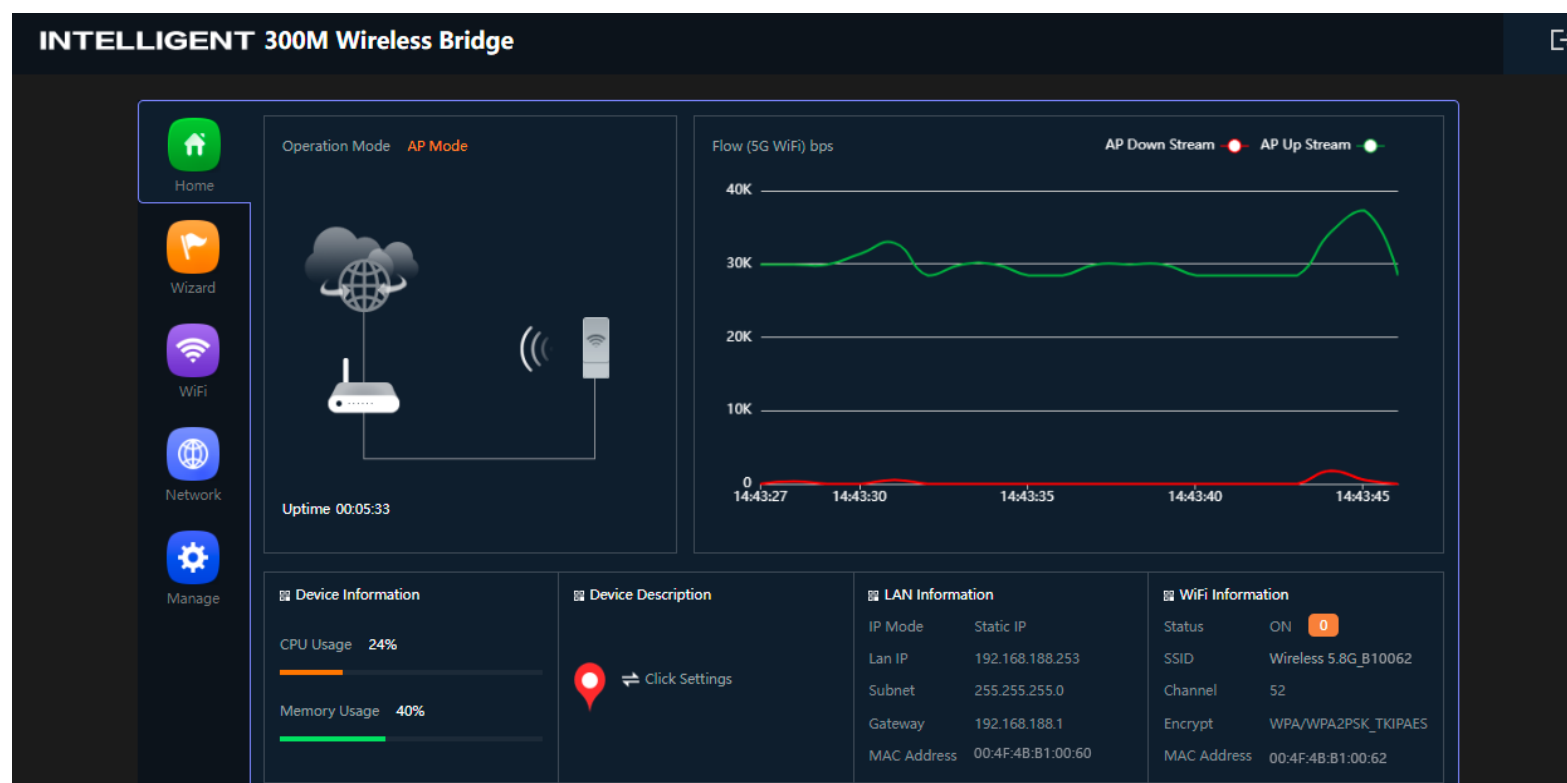

Default ID/Password: **admin**

If the above screen does not pop up, it may mean that your web-browser has been set to a proxy. Go to Tools menu> Internet Options> Connections> LAN Settings on the screen that appears, uncheck **Using Proxy** and click **OK** to finish it.

## Chapter 5. Configuring the CPE

This chapter delivers a detailed presentation of CPE's functionalities and features 3 main items below, allowing you to manage the CPE with ease. The screen shots use the AirMax5X II as an example.

The page includes the following fields:

Object	Description
<b>Operation Mode</b>	It shows the current mode status.
<b>Device Information</b>	It shows the CPU/memory usage.
<b>Device Description</b>	You can enter the device description.
<b>Flow (2.4G/5G Wi-Fi) bps</b>	It shows the Upstream/Downstream graph.
<b>LAN Information</b>	It shows the device IP mode, LAN IP, subnet, gateway and MAC address.
<b>Wi-Fi Information</b>	It shows the Wi-Fi status, SSID, channel, Encryption, MAC address and client list.
<b>Version</b>	It shows the firmware version (Double-click to show more detailed info.).

## 5.1 Wizard

The Wizard guides you to configuring the AirMax5X II in a different mode, including AP ,Repeater mode.

**Figure 5-2** Operation Mode

The default operation mode is AP mode.

Change the PtP switch to optional AP/repeater mode.

## 5.2 AP Mode

Click “Wizard” → “AP Mode” and the following page will be displayed. This section allows you to configure the AP mode.

Figure 5-2 AP Mode

The page includes the following fields:

Object	Description
IP Mode	Select “Static IP” or “DHCP Client” for setting up device IP
LAN IP	Enter the AP static IP address
Subnet	Enter the network mask
Gateway	Enter the default gateway IP address
Primary DNS	Enter the primary DNS IP address, or not insert ip address
Secondary DNS	Enter the secondary DNS IP address, or not insert the ip address

**Figure 5-21** AP Mode – Set up Wi-Fi The page includes the following fields:

Object	Description
<b>Wi-Fi Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable wireless LAN
<b>SSID</b>	It is the wireless network name. The default SSID is “ <b>AirLive_2.4G</b> ” or “ <b>AirLive_5G</b> ”
<b>Hide your SSID ?</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to hide wireless LAN or not
<b>Bandwidth</b>	Select the operating channel width, “ <b>20MHz</b> ” or “ <b>40MHz</b> ” or <b>80MHz</b> ”
<b>Channel</b>	Select the operating channel you would like to use. The channel range will be changed by selecting a different domain.
<b>Encryption</b>	Select the wireless encryption. The default is “ <b>None</b> ”
<b>Timing</b>	Set time to restart

### 5.3 Repeater Mode

Click “Wizard” → “Repeater Mode” and the following page will be displayed. This section allows you to configure the Repeater mode.

**Figure 5-3** Repeater Mode The page includes the following fields:

Object	Description
Repeater SSID	Enter the root AP's SSID or press “Scan” to select
Lock BSSID	Check to lock the root AP' MAC address
Encryption	Select the wireless encryption of root AP. The default is “WPA/WPA2PSK_TKIP/AES”
Password	Enter the password of root AP
Bandwidth	Select the operating channel width, “20MHz” or “40MHz” or “80MHz”
P2P	Enable switch for Point to Point function

Press the “Scan” button to find the root AP that you need to repeat and press **Choice** to select the AP.

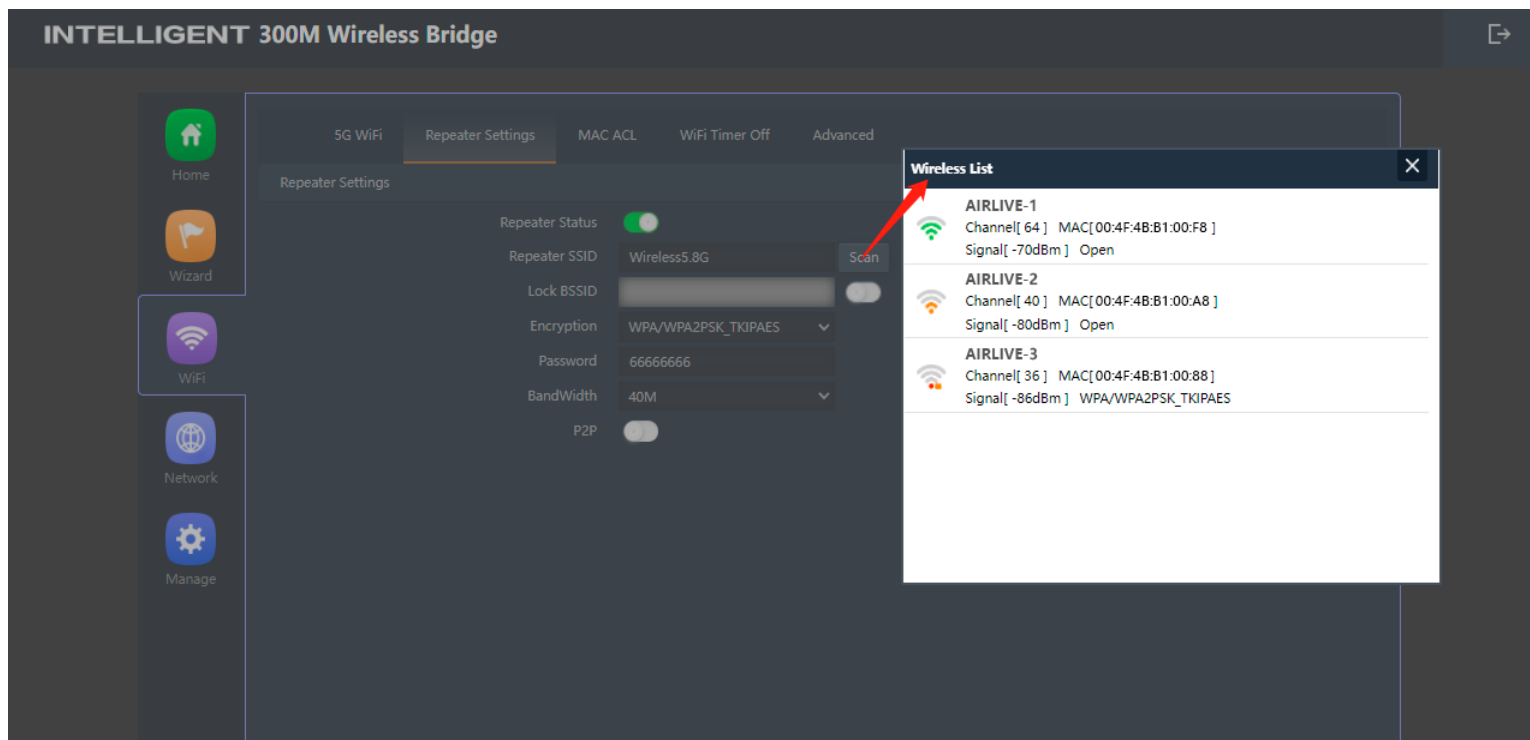

Figure 5-32 Repeater Mode -- Scan AP

Set up the repeater wireless network

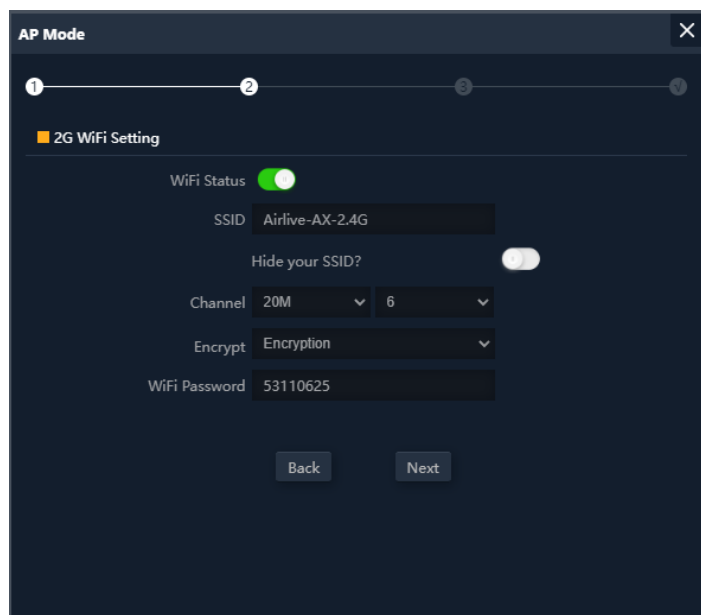

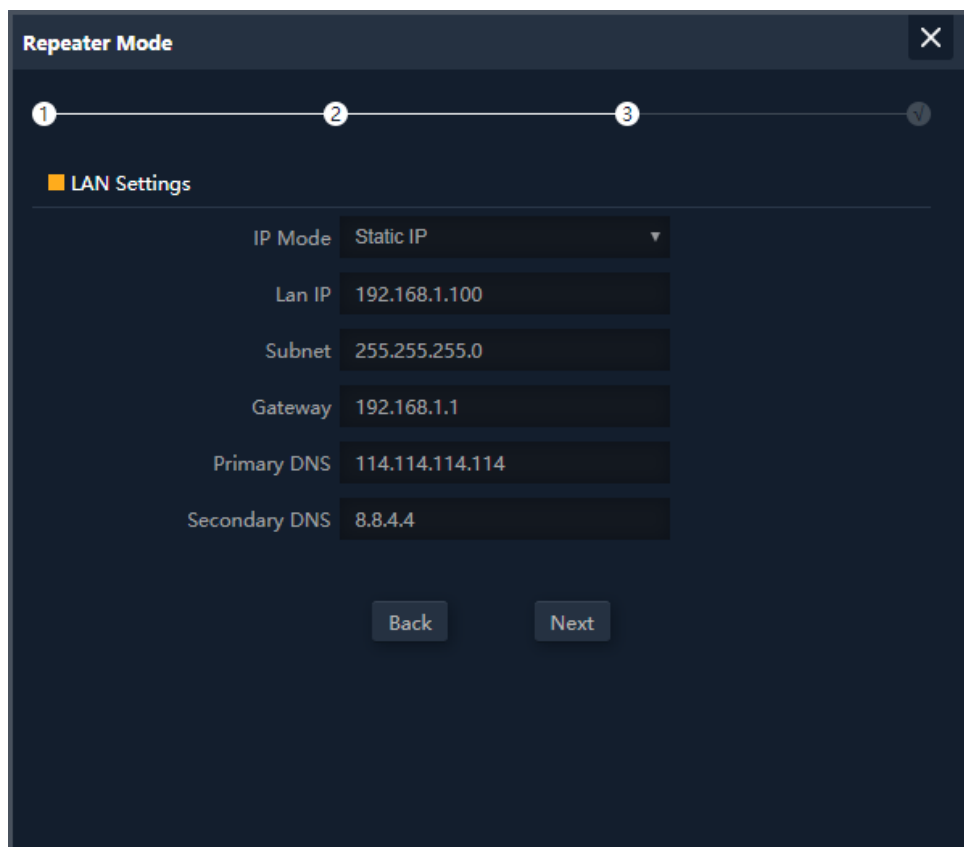

Figure 5-20 Repeater Mode – Setting up Wi-Fi The page includes the following fields:

Object	Description
Wi-Fi Status	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable wireless LAN
SSID	It is the wireless network name. The default SSID is “ <b>AirLive_2.4G</b> ” or “ <b>AirLive_5G</b> ”
Hide your SSID ?	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to hide wireless LAN or not
Encryption	Select the wireless encryption. The default is “ <b>None</b> ”
Timing	Set time to restart

**Figure 5-33** Repeater Mode – Setting up Wi-Fi

The page includes the following fields:

Object	Description
IP Mode	Select “ <b>Static IP</b> ” or “ <b>DHCP Client</b> ” for setting up device IP
LAN IP	Enter the AP static IP address
Subnet	Enter the network mask
Gateway	Enter the default gateway IP address
Primary DNS	Enter the primary DNS IP address, or not
Secondary DNS	Enter the secondary DNS IP address, or not

Enter the LAN IP address.

## 5.4 Wi-Fi

### 2.4G/5G Wi-Fi

#### 5.4.1 Basic

#### INTELLIGENT 300M Wireless Bridge

Object	Description
Wi-Fi Status	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable wireless LAN
SSID	It is the wireless network name. The default SSID is "AirLive_2.4G" or "AirLive_5G"
Hide your SSID ?	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to hide wireless LAN or not
Channel	It shows the channel of the CPE. Default 2.4G channel is 6, and 5GHz is channel 36.
Encryption	Select the wireless encryption. The default is "None"
WMM	Enable/Disable WMM ( Wi-Fi Multimedia ) function
Wi-Fi Analyzer	Press this button to analyze local area wireless signal

## 5.4.2 VAP

The screenshot displays the configuration page for VAP 1. At the top, there are tabs for '2G WiFi', '5G WiFi', 'MAC ACL', 'WiFi Timer Off', and 'Advanced'. Below these, there are sub-tabs for 'Basic', 'VAP 1', 'VAP 2', and 'VAP 3'. The 'VAP 1' tab is selected. The configuration fields are as follows:

- WiFi Status:** A toggle switch is turned ON (green).
- SSID:** A text field containing 'AirLive VLAN100'.
- Hide your SSID?:** A toggle switch is turned OFF (gray).
- Encrypt:** A dropdown menu showing 'Encryption'.
- WiFi Password:** A text field containing '66666666'.
- VLAN ID:** A text field containing '100'. A note below it states 'Vlan-id range must be 3~4094, 0 means not enabled'.

An 'Apply' button is located in the bottom right corner.

Figure 5-23 VAP

Select VAP1~VAP3 to enable virtual AP

The page includes the following fields:

Object	Description
<b>Wi-Fi Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable virtual wireless LAN
<b>SSID</b>	It is the wireless network name. The default SSID is "AirLive_2.4G_1" to "AirLive_2.4G_3" or "AirLive_5G_1" to "AirLive_5G_3"
<b>Hide your SSID ?</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to hide wireless LAN or not
<b>Channel</b>	It shows the channel of the CPE. Default 2.4GHz is channel 6, and 5GHz is channel 36.
<b>Encryption</b>	Select the wireless encryption. The default is "None"
<b>WMM</b>	Enable/Disable WMM (Wi-Fi Multimedia ) function

## MAC ACL

### 5.4.3 MAC ACL=MAC Access Control List

Figure 5-104 MAC ACL

The page includes the following fields:

Object	Description
<b>Add</b>	Press the “ <b>Add</b> ” button to add end-device that is scanned from wireless network and mark them
<b>Delete</b>	Press the “ <b>Delete</b> ” button to delete device from list
<b>Apply</b>	Press the “ <b>Apply</b> ” button to enable/disable the rule
<b>ACL Status</b>	Select the rule of ACL, default is <b>Disable</b> . Whitelist: <b>Allows the devices to pass in the rule</b> Blacklist: <b>Prohibited rules within the device through</b>

Figure 5-25 ACL status

## Wi-Fi Timer Off

### 5.4.4 Wi-Fi Timer Off

Figure 5-26 Wi-Fi Timer Off

The page includes the following fields:

Object	Description
Wi-Fi Timer Off	Select ON ( <b>Green</b> ) or OFF ( <b>Gray</b> ) to enable or disable timer
Time Frame	Choose the time frame of Wi-Fi

## Advanced

## 5.4.5 Advanced

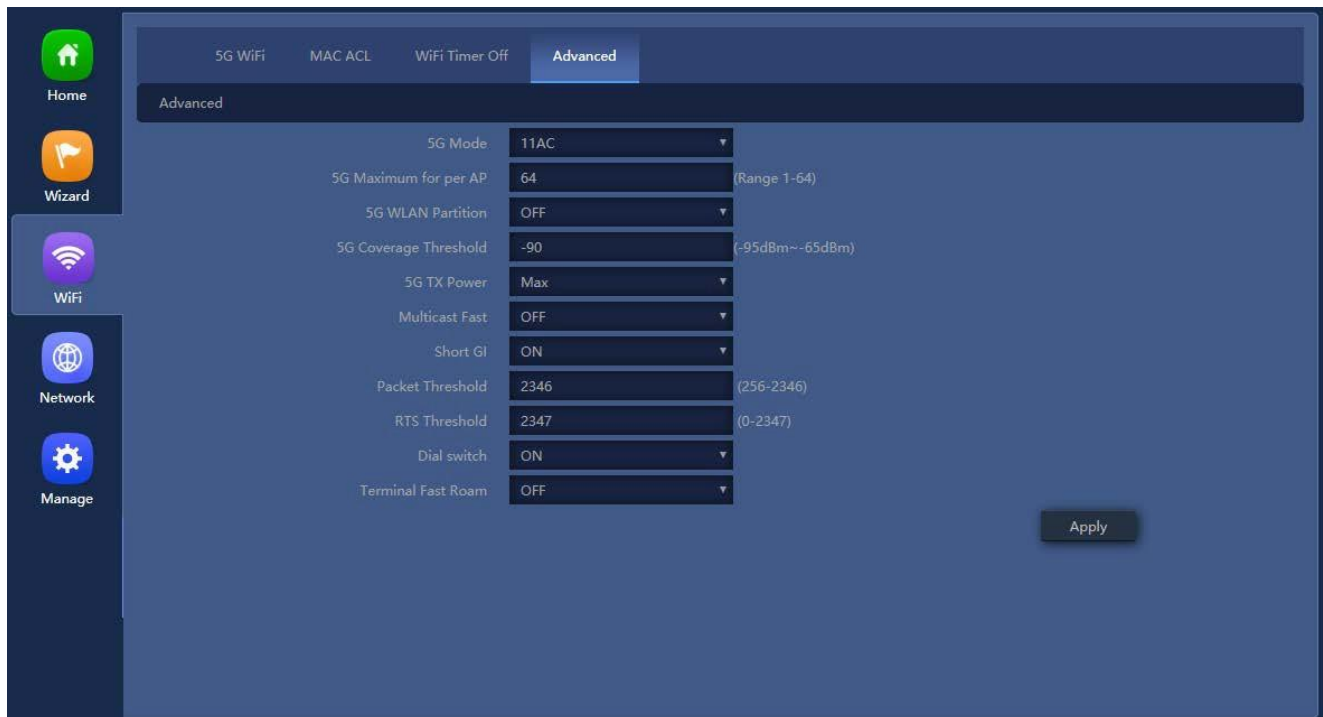

Figure 5-27 Advanced The page includes the following fields:

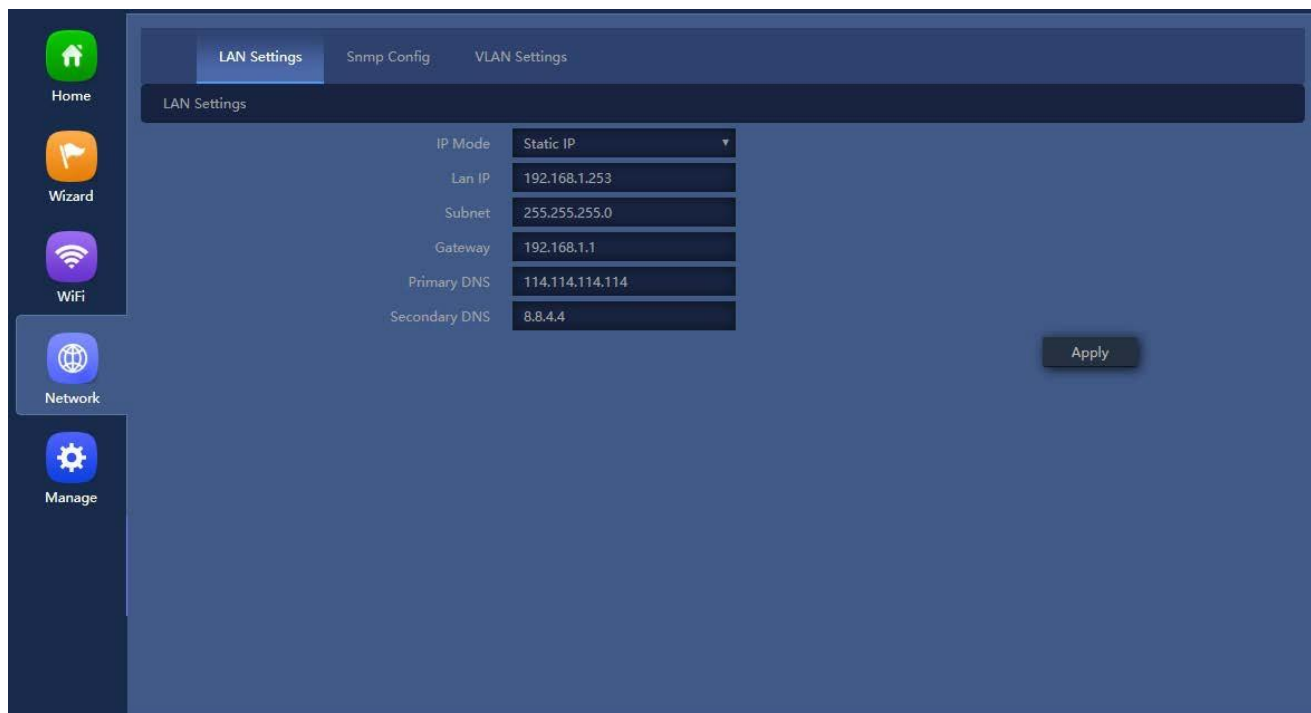

Object	Description
<b>2.4G/5G Mode</b>	Select <b>802.11A</b> or <b>802.11AN</b> or <b>802.11AC</b> in CPE
<b>Maximum 2.4G/5G per AP</b>	The maximum users are <b>64</b> per radio
<b>2.4G/5G WLAN Partition</b>	Enable it to isolate each connected wireless client so that they cannot access mutually.
<b>2.4G/5G Coverage Threshold</b>	The coverage threshold is to limit the weak signal of clients occupying session. The default is -90dBm
<b>2.4G/5G TX Power</b>	The range of transmit power is <b>Max (100%)</b> , <b>Efficient (75%)</b> , <b>Enhanced (50%)</b> , <b>Standard (25%)</b> or <b>Min (12.5%)</b> . In case of shortening the distance and the coverage of the wireless network, input a smaller value to reduce the radio transmission power
<b>Multicast Fast</b>	A part of the 802.11n standard that allows sending multiple frames per single access to the medium by combining frames together into one larger frame. It creates the larger frame by combining smaller frames with the same physical source, destination end points, and traffic class (QoS) into one large frame with a common MAC header
<b>Short GI</b>	Guard intervals are used to ensure that distinct transmissions do not interfere with one another.
<b>Packet Threshold</b>	When the length of a data packet exceeds this value, the router will

	send an RTS frame to the destination wireless node, and the latter will reply with a CTS frame, and thus they are ready to communicate. The default value is <b>2346</b>
<b>RTS Threshold</b>	Enable or Disable RTS/CTS protocol. It can be used in the following scenarios and used by Stations or Wireless AP. 1)When medium is too noisy or lots of interferences are present. If the AP/Station cannot get a chance to send a packet, the RTS/CTS mechanism can be initiated to get the packet sent. 2)In mixed mode, the hidden node problem can be avoided. The default value is <b>2347</b>
<b>Dial Switch</b>	Enable or Disable physical PtP switch
<b>Terminal Fast Roam</b>	Enable or Disable 802.11k, 802.11v and 802.11r

## 5.5 Network

### 5.5.1 LAN Settings

**Figure 5-28** LAN Settings The page includes the following fields:

Object	Description
<b>IP Mode</b>	Select “ <b>Static IP</b> ” or “ <b>DHCP Client</b> ” for setting up device IP
<b>LAN IP</b>	Enter the AP static IP address
<b>Subnet</b>	Enter the network mask
<b>Gateway</b>	Enter the default gateway IP address
<b>Primary DNS</b>	Enter the primary DNS IP address, or not
<b>Secondary DNS</b>	Enter the secondary DNS IP address, or not

### 5.5.2 SNMP Config

**Figure 5-29** SNMP Config

The page includes the following fields:

Object	Description
<b>Read Community</b>	Enter the read community, default is <b>public</b>
<b>Write Community</b>	Enter the write community, default is <b>private</b>
<b>Trap Destination Address</b>	Enter the SNMP trap IP address, default is <b>192.168.1.100</b>

### 5.5.3 VLAN Settings

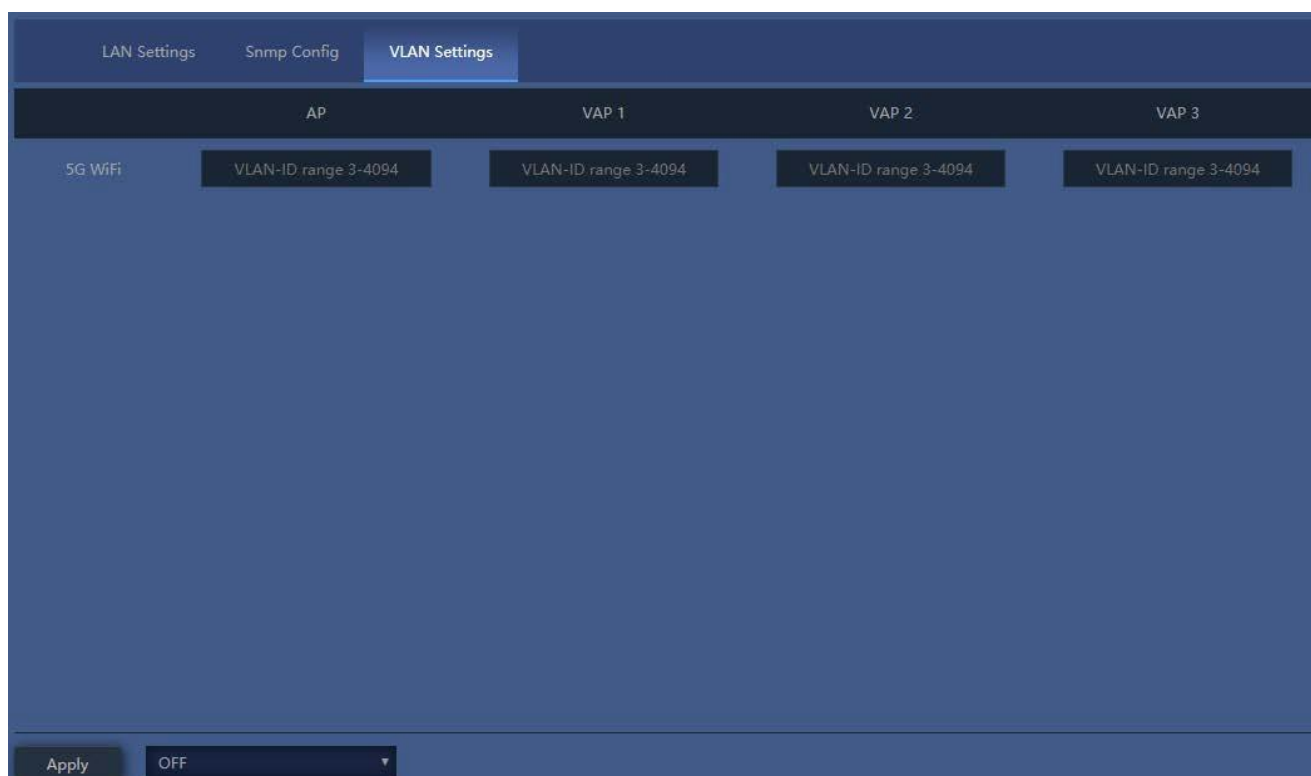

Figure 5-11 VLAN Settings

The page includes the following fields:

Object	Description
<b>AP</b>	Select AP or VAP included in the VLAN
<b>VLAN ID</b>	Enter the VLAN ID from 3 to 4094

### 5.5.4 WAN Settings

#### Static IP

If your ISP offers you static IP Internet connection type, select "**Static IP**" and then enter IP address, subnet mask, default gateway and primary DNS information provided by your ISP in the corresponding fields.

The screenshot shows the 'WAN Settings' configuration page. The 'Connect Method' is set to 'Static IP'. The 'IP Address' and 'Subnet' fields are empty. The 'Default Gateway' field is empty. The 'MTU' field is set to 1500, with a range of (1400-1500) shown. The 'Primary DNS' field is set to 8.8.8.8 and the 'Secondary DNS' field is set to 4.4.4.4. The 'Band Type' is set to 1000M Fiber. The 'Upstream' field is set to 1000000 Kbps and the 'Downstream' field is set to 1000000 Kbps. An 'Apply' button is located at the bottom right of the form.

**Figure 5-31** Static IP

The page includes the following fields:

Object	Description
<b>IP Address</b>	Enter the WAN IP address provided by your ISP. Enquire your ISP if you are not clear
<b>Subnet</b>	Enter WAN Subnet Mask provided by your ISP
<b>Default Gateway</b>	Enter the WAN Gateway address provided by your ISP
<b>MTU</b>	Maximum Transmission Unit. Default is 1500
<b>Primary DNS</b>	Enter the necessary DNS address provided by your ISP
<b>Secondary DNS</b>	Enter the secondary DNS address provided by your ISP
<b>Upstream</b>	Enter limited upstream throughput, default is <b>1000000</b> Kbps
<b>Downstream</b>	Enter limited downstream throughput, default is <b>1000000</b> Kbps

#### PPPoE (ADSL)

Select **PPPOE** if your ISP is using a PPPoE connection and provide you with PPPoE user name and password info.

The screenshot shows the WAN Settings page for PPPoE (ADSL) configuration. The page includes the following fields:

- Connect Method: PPPoE
- Username: Please enter account.
- Password: Please enter password.
- Server Name: If not, please do not fill out
- Service Name: If not, please do not fill out
- MTU: 1452 (1400-1492)
- Set DNS Manually:
- Primary DNS: 8.8.8.8
- Secondary DNS: 4.4.4.4
- Band Type: 1000M Fiber
- Upstream: 1000000 Kbps
- Downstream: 1000000 Kbps

An Apply button is located at the bottom right of the page.

**Figure 5-32** PPPoE (ADSL) The page includes the following fields:

Object	Description
<b>Username</b>	Enter the PPPoE User Name provided by your ISP
<b>Password</b>	Enter the PPPoE password provided by your ISP
<b>Set DNS Manually</b>	Enable/Disable DNS Manually
<b>Primary DNS</b>	Enter the necessary DNS address provided by your ISP
<b>Secondary DNS</b>	Enter the secondary DNS address provided by your ISP
<b>MTU</b>	Maximum Transmission Unit. Default is 1452
<b>Band Type</b>	Select the band type provided by your ISP
<b>Upstream</b>	Enter limited upstream throughput, default is <b>1000000</b> Kbps
<b>Downstream</b>	Enter limited downstream throughput, default is <b>1000000</b> Kbps

#### DHCP

Choose “**DHCP**” and the router will automatically obtain IP addresses, subnet masks and gateway addresses from your ISP.

LAN Settings   Static DHCP   **WAN Settings**   WAN Advanced Settings   URL Mapping

WAN Settings

Connect Method: DHCP

MTU: 1492 (1400-1500)

Set DNS Manually:

Primary DNS: 8.8.8.8

Secondary DNS: 4.4.4.4

**Band Type**: 1000M Fiber

Upstream: 1000000 Kbps

Downstream: 1000000 Kbps

Apply

Figure 5-12 DHCP

The page includes the following fields:

Object	Description
<b>MTU</b>	Maximum Transmission Unit. Default is 1452
<b>Set DNS Manually</b>	Enable/Disable DNS Manually
<b>Primary DNS</b>	Enter the necessary DNS address provided by your ISP
<b>Secondary DNS</b>	Enter the secondary DNS address provided by your ISP
<b>Band Type</b>	Select the band type provided by your ISP
<b>Upstream</b>	Enter limited upstream throughput, default is <b>1000000</b> Kbps
<b>Downstream</b>	Enter limited downstream throughput, default is <b>1000000</b> Kbps

### 5.5.5 WAN advanced settings

LAN Settings   Static DHCP   WAN Settings   **WAN Advanced Settings**   URL Mapping

WAN Advanced Settings

Enable web server access on WAN port: 8080 (1-65535)

MAC Clone:  Scan

Enable Ping Access on WAN

Enable IPsec pass through on VPN connection

Enable PPTP pass through on VPN connection

Enable L2TP pass through on VPN connection

Line Detection: Host Name 1: 114.114.114.114 Host Name 2: 114.114.115.115

Apply

Figure 5-13 WAN advanced settings

The page includes the following fields:

Object	Description
Enable web server access on WAN port	Enable to access from WAN, default port is 8080
MAC clone	Enable and scan to clone the MAC address
Enable Ping Access on WAN	Enable or Disable this function
Enable IPsec passthrough on VPN connection	Enable or disable IPsec to pass through IPsec communication data.
Enable PPTP passthrough on VPN connection	Enable or disable PPTP to pass through PPTP communication data.
Enable L2TP passthrough on VPN connection	Enable or disable L2TP to pass through L2TP communication data.
Line Detection	Enable to ping Host 1 and Host 2 IP. If ping fails, the WAN will be disconnected.

## 5.6 Security

### 5.6.1 URL Filtering

The figure displays two screenshots of the 'Url Filter' configuration window. Both windows have a title bar with 'Url Filter' and a close button (X). The top window shows the following fields: 'Status' (checked), 'Rule Name' (Black list), 'Time Group' (Any), 'Add' button, 'URL' (www.faceback.com), 'Mark' field, and 'Save' button. The bottom window shows: 'Status' (checked), 'Rule Name' (Black list), 'Time Group' (Custom), 'Add' button, 'Time Range' (00 : 00 - 00 : 00), 'Work Date' (Everyday), 'URL' (www.faceback.com), 'Mark' field, and 'Save' button.

Figure 5-35 URL Filtering

The page includes the following fields:

Object	Description
<b>Add</b>	Press the <b>"Add"</b> button to add the rule
<b>Delete</b>	Press the <b>"Delete"</b> button to delete the rule

<b>Apply</b>	Press the “ <b>Apply</b> ” button to enable/disable the rule
<b>Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable
<b>Rule Name</b>	Enter the rule name, e.g. Black list
<b>Time Group</b>	Select <b>Any</b> or <b>Customer</b> to set up time range and work data.
<b>URL</b>	Enter the URL that you need to put in Blacklist
<b>Mark</b>	Enter the mark string, or not

Enable/disable URL filter function

Figure 5-36 URL Filtering

### 5.6.2 IP/Port Filtering

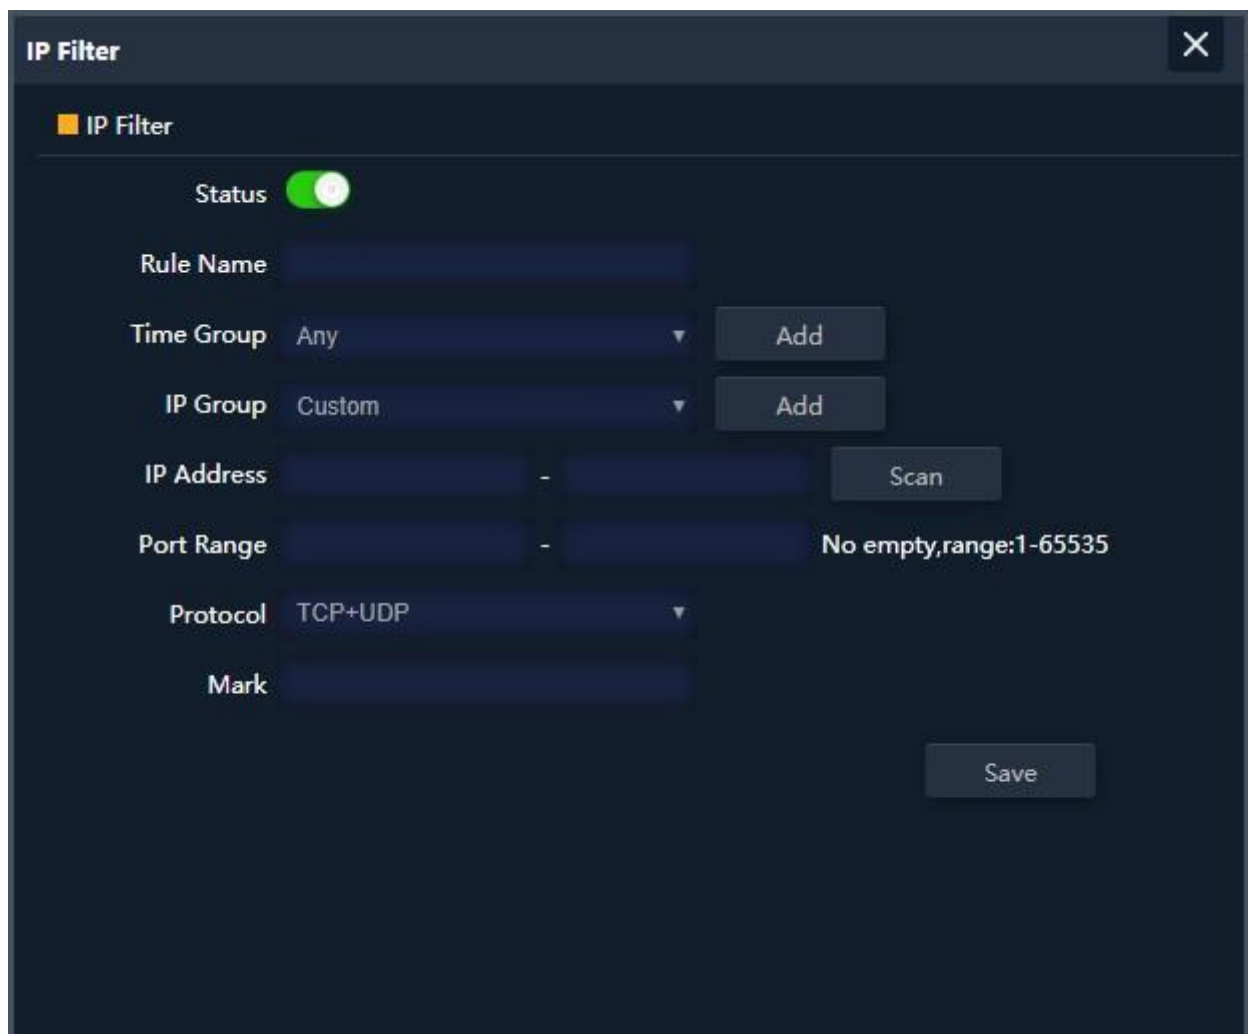

Figure 5-37 IP/Port Filtering

The page includes the following fields:

Object	Description
<b>Add</b>	Press the “ <b>Add</b> ” button to add the rule in the Black- or Whitelist
<b>Delete</b>	Press the “ <b>Delete</b> ” button to delete the rule
<b>Apply</b>	Press the “ <b>Apply</b> ” button to enable/disable the rule
<b>Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable
<b>Rule Name</b>	Enter the rule name, e.g. Black list
<b>Time Group</b>	Select <b>Any</b> or <b>Customer</b> to set up time range and work data.
<b>IP Group</b>	Select IP Group for adding IP by entering IP range or by scanning devices
<b>IP Address</b>	Enter the IP that you need to put in Black- or Whitelist
<b>Port Range</b>	Enter the web port to access
<b>Protocol</b>	Select <b>TCP</b> , <b>UDP</b> or <b>TCP+UDP</b>
<b>Mark</b>	Enter the mark string, or not
<b>IP/Port Filtering Status</b>	Select the rule of IP/Port Filtering, default is <b>Disable</b> .  Whitelist: <b>Allow the devices to pass in the rule</b>  Blacklist: <b>Prohibited rules within the device through</b>

Figure 5-38 IP/Port Filtering

## 5.6.3 MAC Filtering

The figure displays two screenshots of the MAC Filter configuration interface, showing the process of setting up a custom time group for filtering.

**Top Screenshot:** The interface is titled "MAC Filter" and has a close button (X) in the top right corner. Below the title, there is a section labeled "MAC Filter" with a toggle switch for "Status" which is turned on. The "Rule Name" field is empty. The "Time Group" dropdown menu is set to "Any". To the right of the dropdown are "Add" and "Scan" buttons. Below the dropdown is the "MAC Address" field, and below that is the "Mark" field. A "Save" button is located at the bottom right.

**Bottom Screenshot:** The interface is titled "MAC Filter" and has a close button (X) in the top right corner. Below the title, there is a section labeled "MAC Filter" with a toggle switch for "Status" which is turned on. The "Rule Name" field is empty. The "Time Group" dropdown menu is set to "Custom". To the right of the dropdown are "Add" and "Scan" buttons. Below the dropdown is the "Time Range" field, which is set to "00 : 00 - 00 : 00". Below the time range is the "Work Date" dropdown menu, which is set to "Everyday". Below the dropdown is the "MAC Address" field, and below that is the "Mark" field. A "Save" button is located at the bottom right.

Figure 5-39 MAC Filtering

The page includes the following fields:

Object	Description
<b>Add</b>	Press the <b>“Add”</b> button to add the rule in the Black- or Whitelist
<b>Delete</b>	Press the <b>“Delete”</b> button to delete the rule
<b>Apply</b>	Press the <b>“Apply”</b> button to enable/disable the rule
<b>Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable
<b>Rule Name</b>	Enter the rule name, e.g. Black list
<b>Time Group</b>	Select <b>Any</b> or <b>Customer</b> to set up time range and work data.
<b>MAC Address</b>	Enter the MAC address that you need to put in Black- or Whitelist
<b>Mark</b>	Enter the mark string, or not
<b>MAC Filtering Status</b>	Select the rule of MAC Filtering, default is <b>Disable</b> . Whitelist: <b>Allow the devices to pass in the rule</b> Blacklist: <b>Prohibited rules within the device through</b>

**Figure 5-40** MAC Filtering

## 5.6.4 Security (Port Mapping/Port Forwarding)

Figure 5-41 Port Mapping

The page includes the following fields:

Object	Description
<b>Add</b>	Press the <b>“Add”</b> button to add the rule in the black or white list
<b>Delete</b>	Press the <b>“Delete”</b> button to delete the rule
<b>Apply</b>	Press the <b>“Apply”</b> button to enable/disable the rule
<b>Status</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable
<b>Rule Name</b>	Enter the rule name, e.g. Black list
<b>Protocol</b>	Select <b>TCP</b> , <b>UDP</b> or <b>TCP+UDP</b>
<b>LAN IP</b>	Enter the IP address that you need for port forwarding
<b>External Port</b>	Enter the external port range
<b>Internal Port</b>	Enter the internal port range
<b>Mark</b>	Enter the mark string, or not

Enable/disable Port Mapping function

Figure 5-42 Port Mapping

### 5.6.5 DMZ

Figure 5-43 DMZ

The page includes the following fields:

Object	Description
Enable DMZ	Select <b>Enable DMZ Host</b> or <b>Disable</b>
DMZ Host IP	Enter the DMZ LAN IP

## 5.7 Manage

### 5.7.1 Configure

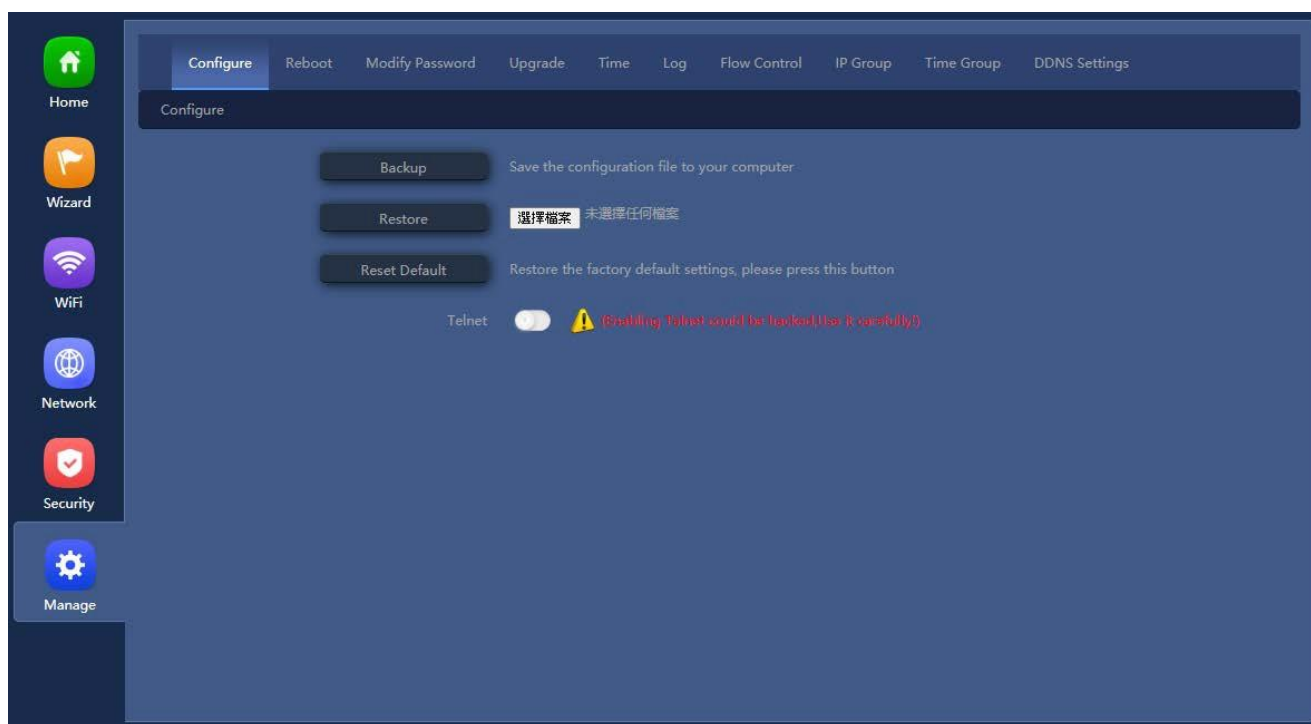

Figure 5-44 Configure

Object	Description
Backup	Press the <b>“Backup”</b> button to save the configuration file to your computer
Restore	Press the <b>“Restore”</b> button to reload the configuration file from your computer
Reset Default	Press the <b>“Reset Default”</b> button to do factory default, be careful.
Telnet	(Enabling Telnet could be hacked,Use it carefully!) Only for AirLive support team using.

## 5.7.2 Reboot

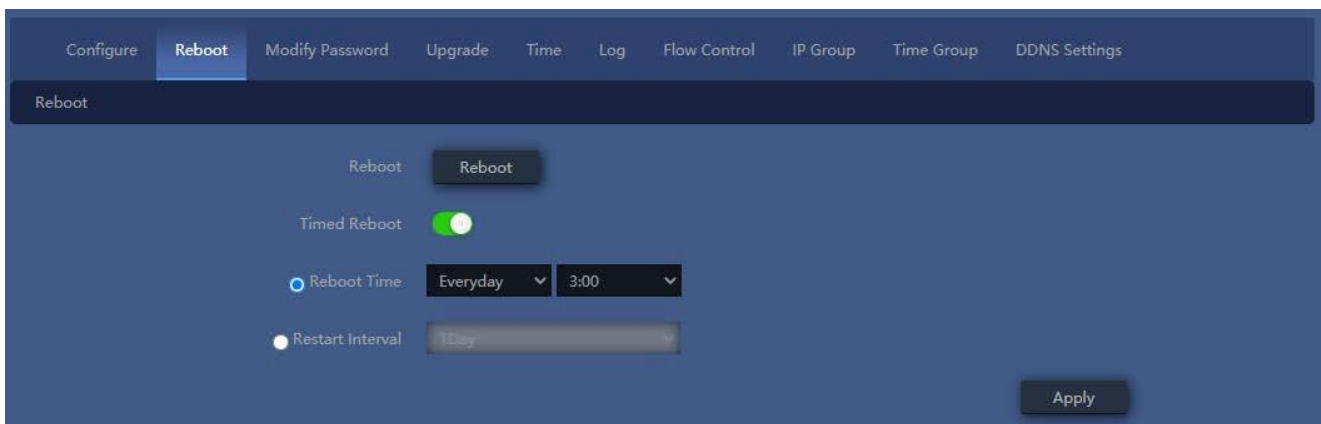

Figure 5-45 Reboot

The page includes the following fields:

Object	Description
<b>Reboot</b>	Press the <b>“Reboot”</b> button to restart system
<b>Timed Reboot</b>	Select ON ( <b>Green</b> ) or OFF ( <b>Gray</b> ) to enable or disable schedule reboot
<b>Reboot Time</b>	Option <b>“Reboot Time”</b> to set the date and time of the rule
<b>Restart Interval</b>	Option <b>“Restart Interval”</b> to select duty day of the rule

## 5.7.3 Modify Password

The page you can change the password.

Figure 5-46 Modify Password

### 5.7.4 Upgrade

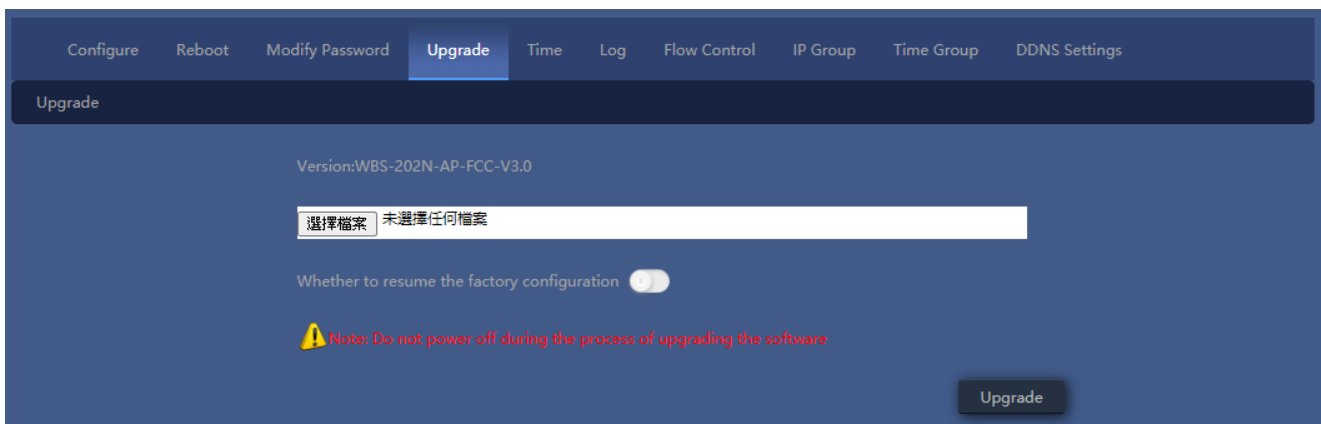

Figure 5-47 Upgrade

The page includes the following fields:

Object	Description
Select file	Press the “ <b>Select file</b> ” button to reload the firmware file from your computer <b>Be careful, choose the wrong file will crash the database</b>
Whether to resume the factory configuration	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable factory default after upgrade firmware
Upgrade	Press the “ <b>Upgrade</b> ” button to start the process

### 5.7.5 Time

Figure 5-48 Time

The page includes the following fields:

Object	Description
System Time	Show the system time status

<b>NTP Enable</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable NTP
<b>Time Zone Select</b>	Select the time zone for GMT
<b>Manual IP settings</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable manual IP function
<b>NTP Server</b>	Select the NTP server

### 5.7.6 Log

Figure 5-49 Log

The page includes the following fields:

Object	Description
<b>Log</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable
<b>Remote Log Service</b>	Select <b>ON (Green)</b> or <b>OFF (Gray)</b> to enable or disable remote log function and enter the log server IP address
<b>Export</b>	Press the “ <b>Export</b> ” button to export the log.bin file
<b>Delete</b>	Press the “ <b>Delete</b> ” button to clear the log
<b>Refresh</b>	Press the “ <b>Refresh</b> ” button to refresh the log
<b>Apply</b>	Press the “ <b>Apply</b> ” button to save the configuration

## 5.7.7 Flow Control

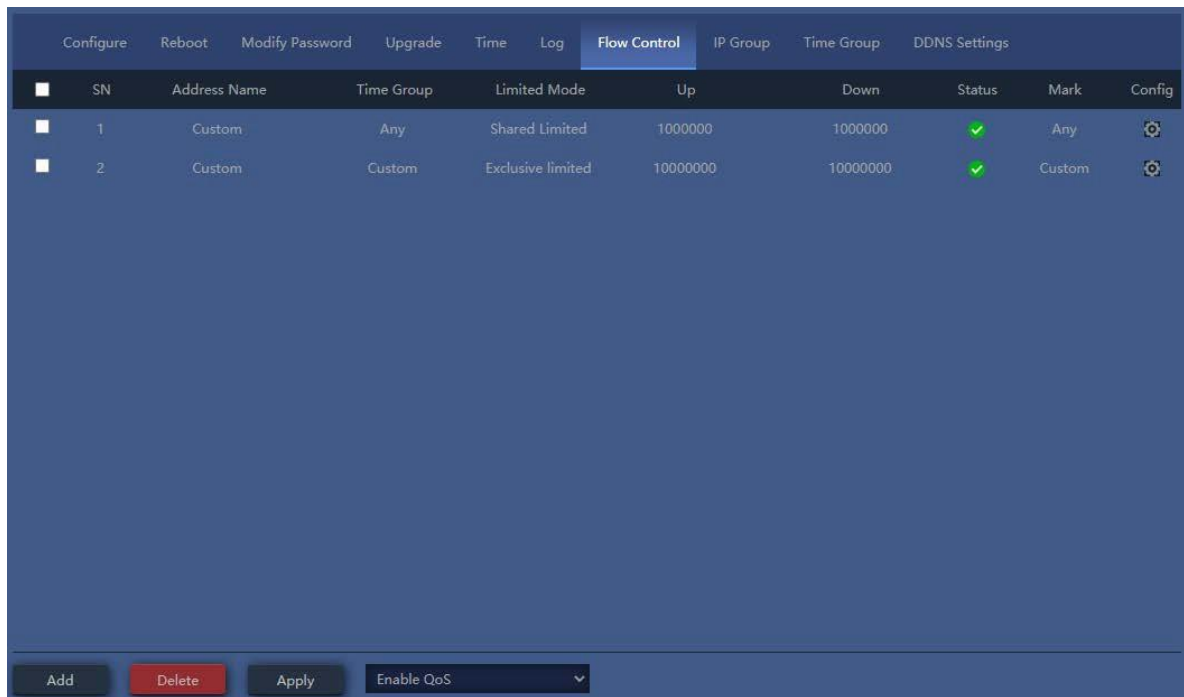

Figure 5-50 Setup Flow Control

The page includes the following fields:

Object	Description
<b>Add</b>	Press the “ <b>Add</b> ” button to add the rule in the control list
<b>Delete</b>	Press the “ <b>Delete</b> ” button to delete the rule
<b>Apply</b>	Press the “ <b>Apply</b> ” button to enable/disable the rule
<b>Status</b>	Select enable or disable QoS rule

Enable/disable Port Mapping function

Figure 5-51 Enable or Disable QoS Rule

**Figure 5-52** Add rule of flow control(Speed Limit)

The page includes the following fields:

Object	Description
Status	Select enable or disable flow control rule
IP Group	Select custom or Add an IP group
IP Address	Enter an IP address range or use scan to select
Time Group	Select any or custom or Add a Time group
Limited Mode	Select limited mode for shared limited bandwidth or exclusive limited bandwidth
Up	Enter the upstream limited for kbps
Down	Enter the downstream limited for kbps
Mark	Enter the mark string, or not

### 5.7.8 IP Group

Figure 5-53 IP Group

The page includes the following fields:

Object	Description
Add	Press the “Add” button to add IP group in list
Delete	Press the “Delete” button to delete the group

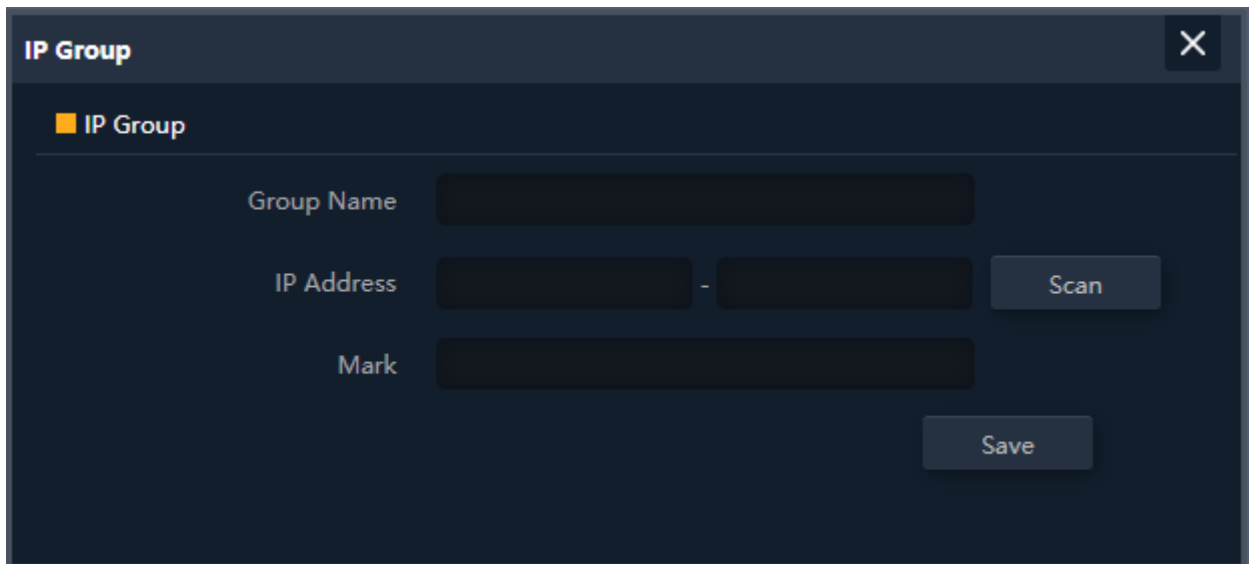

The image shows a dark-themed dialog box titled 'IP Group' with a close button (X) in the top right corner. Inside the dialog, there is a section header 'IP Group' with a small yellow square icon. Below this, there are three input fields: 'Group Name', 'IP Address' (with a hyphen separator between two sub-inputs), and 'Mark'. To the right of the 'IP Address' field is a 'Scan' button. At the bottom right of the dialog is a 'Save' button.

Figure 5-54 Add IP Group

The page includes the following fields:

Object	Description
Group Name	Enter an IP group description
IP Address	Enter an IP address range or use scan to select
Mark	Enter the mark string, or not

### 5.7.9 Time Group

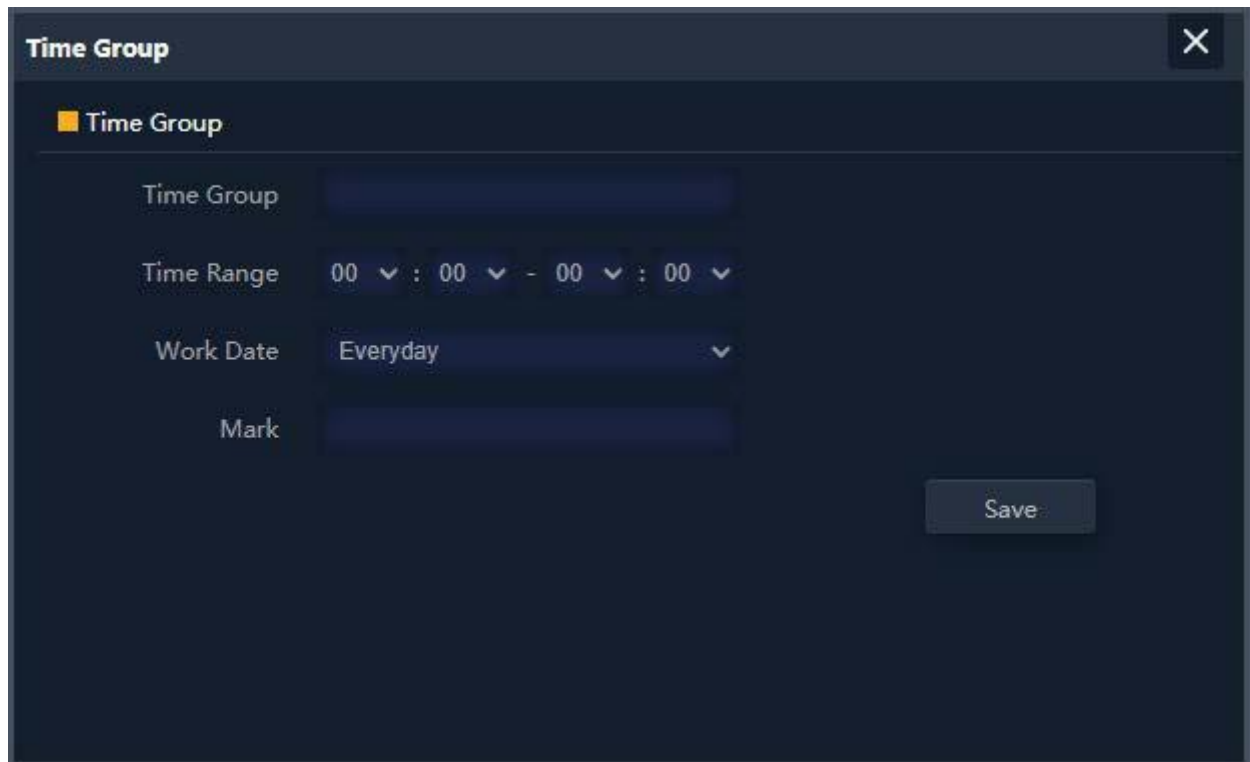

Figure 5-55 Time Group

The page includes the following fields:

Object	Description
Add	Press the <b>"Add"</b> button to add time group in list
Delete	Press the <b>"Delete"</b> button to delete the group

**Time Group**

■ Time Group

Time Group

Time Range 00 : 00 - 00 : 00

Work Date Everyday

Mark

Save

**Figure 5-56** Add Time Group

The page includes the following fields:

Object	Description
<b>Time Group</b>	Enter a time group description
<b>Time Range</b>	Select start time and end time for time range
<b>Work Date</b>	Select workday by option table
<b>Mark</b>	Enter the mark string, or not

## Chapter 6. Quick Connection to a Wireless Network

In the following sections, the **default SSID** of the AirMax5X II is configured to “**default**”.

### 6.1 Windows XP (Wireless Zero Configuration)

**Step 1:** Right-click on the **wireless network icon** displayed in the system tray

Figure 6-1 System Tray – Wireless Network Icon

**Step 2:** Select [View Available Wireless Networks]

**Step 3:** Highlight and select the wireless network (SSID) to connect

- (1) Select SSID [default]
- (2) Click the [Connect] button

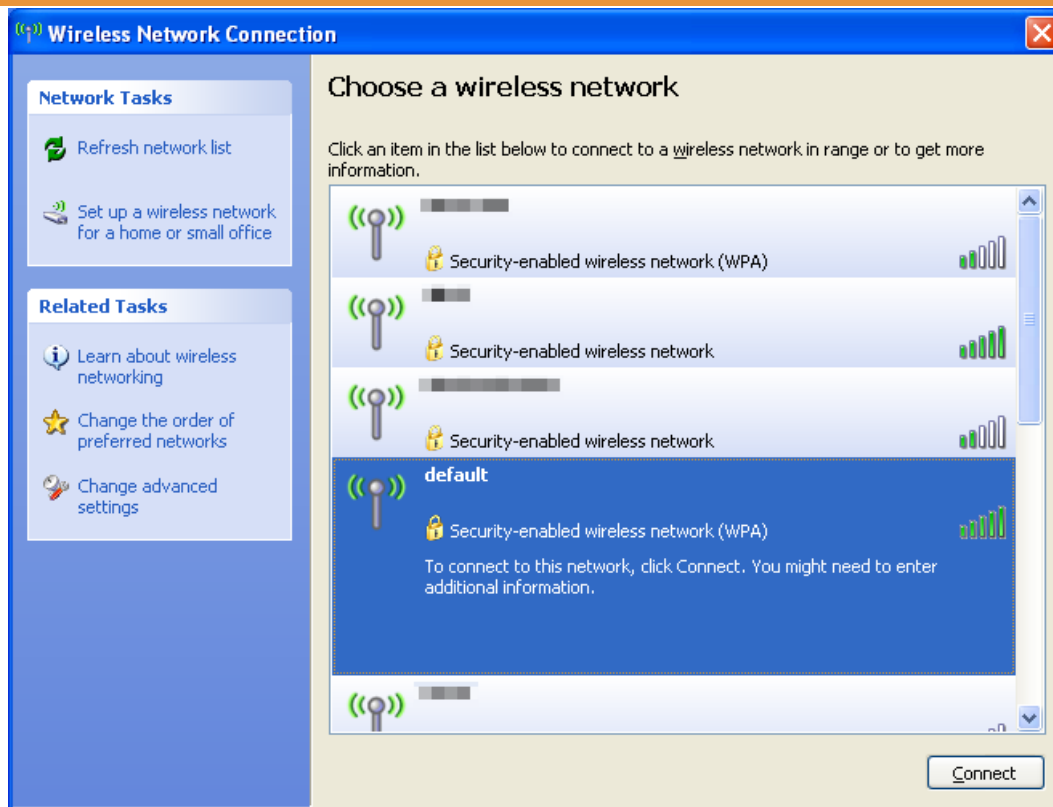

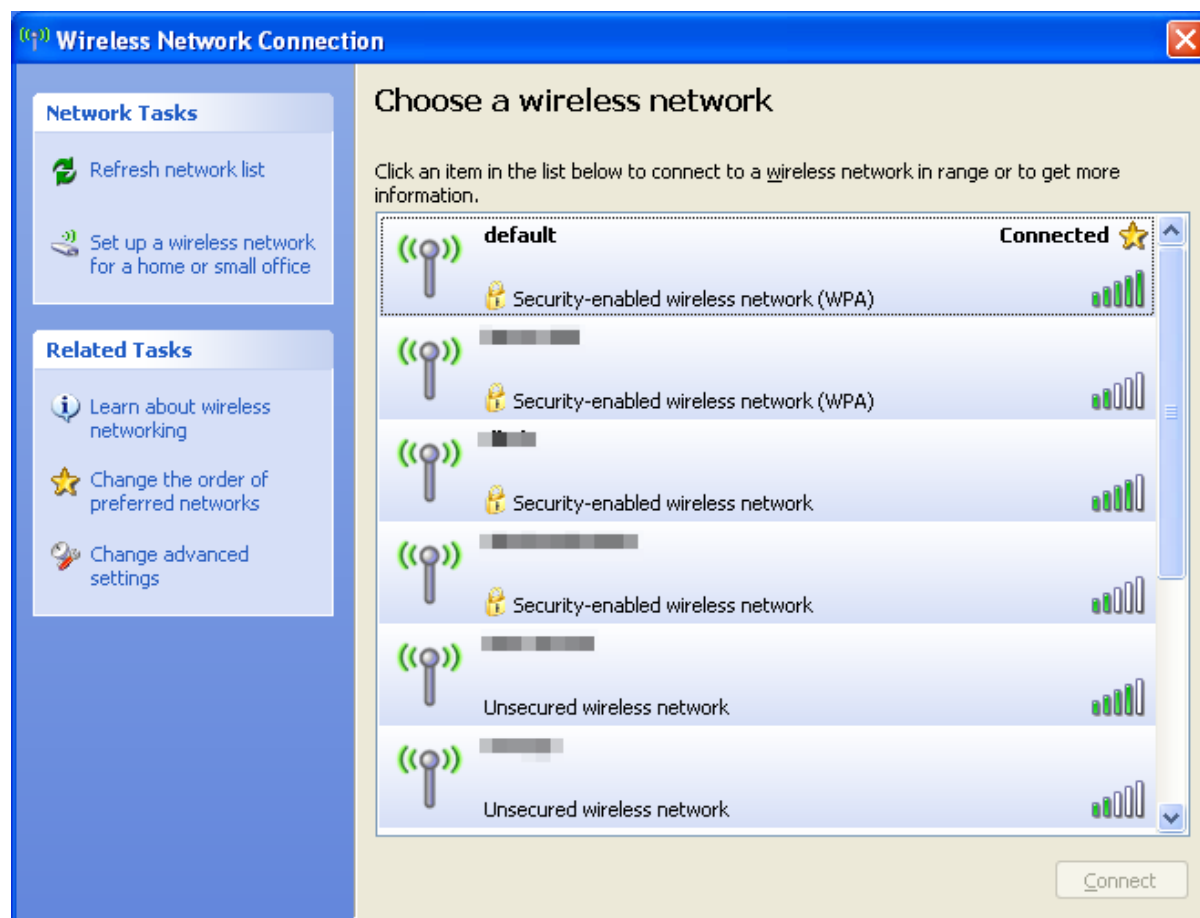

Figure 6-2 Choosing a Wireless Network

**Step 4:** Enter the **encryption key** of the wireless AP

- (1) The Wireless Network Connection box will appear
- (2) Enter the encryption key that is configured in [section 5.7.2.1](#)
- (3) Click the [Connect] button

**Figure 6-3** Entering the Network Key**Step 5:** Check if “**Connected**” is displayed**Figure 6-4** Choosing a Wireless Network -- Connected

Some laptops are equipped with a “Wireless ON/OFF” switch for the internal wireless LAN. Make sure the hardware wireless switch is switched to “ON” position.

## 6.2 Windows 7 (WLAN AutoConfig)

WLAN AutoConfig service is built-in in Windows 7 that can be used to detect and connect to wireless network. This built-in wireless network connection tool is similar to wireless zero configuration tool in Windows XP.

**Step 1:** Right-click on the **network icon** displayed in the system tray

Figure 6-5 Network Icon

**Step 2:** Highlight and select the wireless network (SSID) to connect

- (1) Select SSID [**default**]
- (2) Click the [**Connect**] button

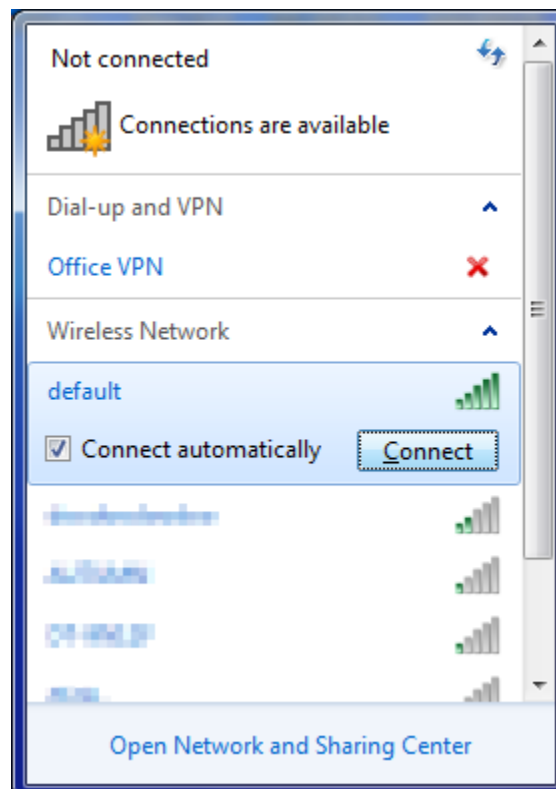

Figure 6-6 WLAN AutoConfig

Note

If you will be connecting to this Wireless AP in the future, check [**Connect automatically**].

**Step 4:** Enter the **encryption key** of the wireless AP

- (1) The Connect to a Network box will appear
- (2) Enter the encryption key that is configured
- (3) Click the [OK] button

Figure 6-7 Typing the Network Key

Figure 6-8 Connecting to a Network

**Step 5:** Check if **“Connected”** is displayed

**Figure 6-9** Connected to a Network

## 6.3 Mac OS X 10.x

In the following sections, the default SSID of the AirMax5X II is configured to “default”.

**Step 1:** Right-click on the **network icon** displayed in the system tray

The AirPort Network Connection menu will appear

Figure 6-10 Mac OS – Network Icon

**Step 2:** Highlight and select the wireless network (SSID) to connect

- (1) Select and SSID [default]
- (2) Double-click on the selected SSID

Figure 6-11 Highlighting and Selecting the Wireless Network

**Step 4:** Enter the **encryption key** of the wireless AP

- (1) Enter the encryption key that is configured
- (2) Click the [OK] button

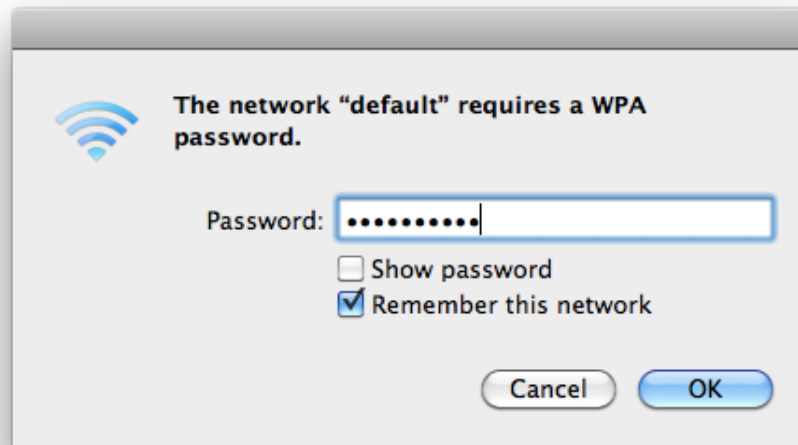

Figure 6-12 Enter the Password

If you will be connecting to this Wireless AP in the future, check [**Remember this network**].

**Step 5:** Check if the AirPort is connected to the selected wireless network.

If "Yes", then there will be a "check" symbol in front of the SSID.

Figure 6-13 Connected to the Network

There is another way to configure the MAC OS X wireless settings:

**Step 1:** Click and open the [System Preferences] by going to **Apple > System Preference** or **Applications**

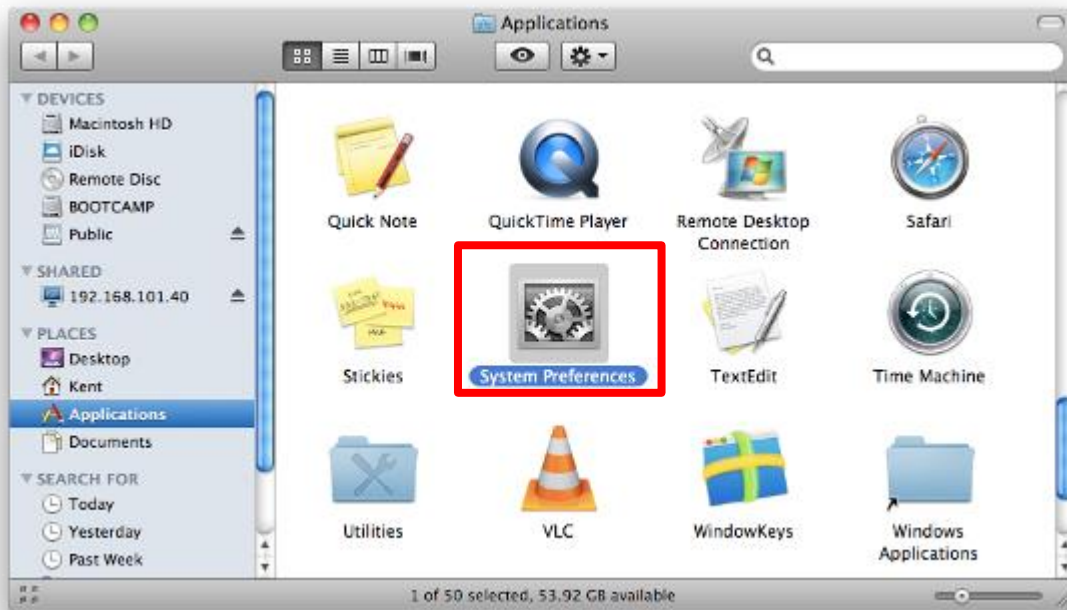

Figure 6-14 System Preferences

**Step 2:** Open **Network Preference** by clicking on the [Network] icon

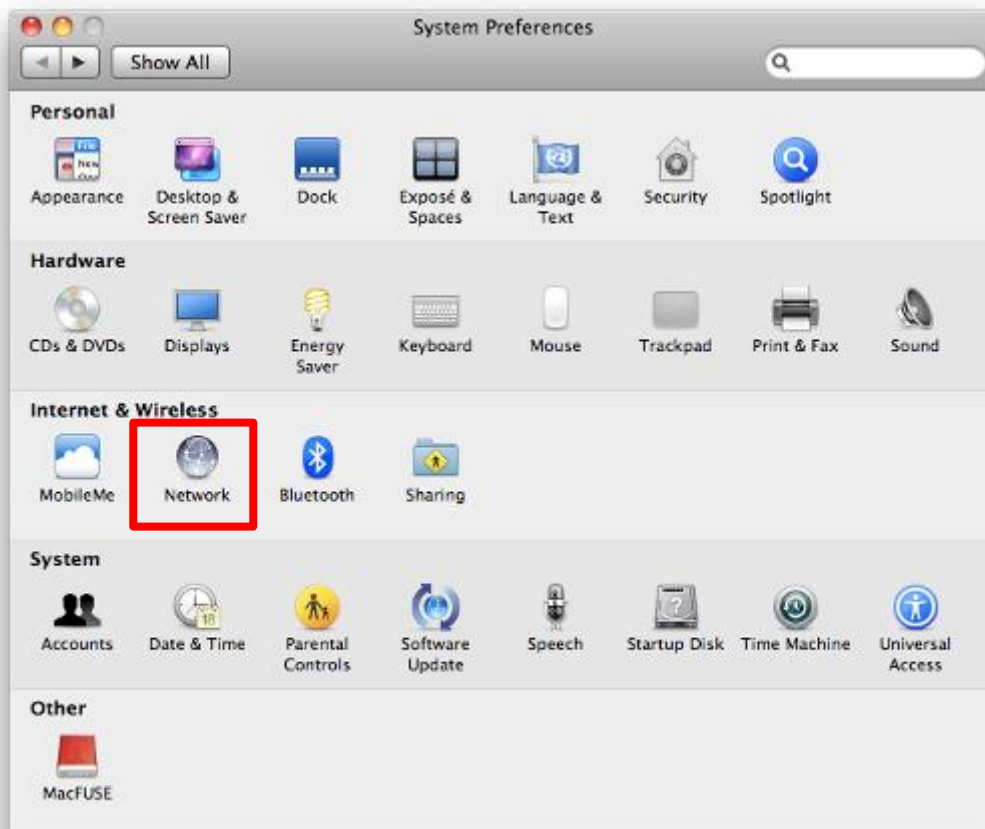

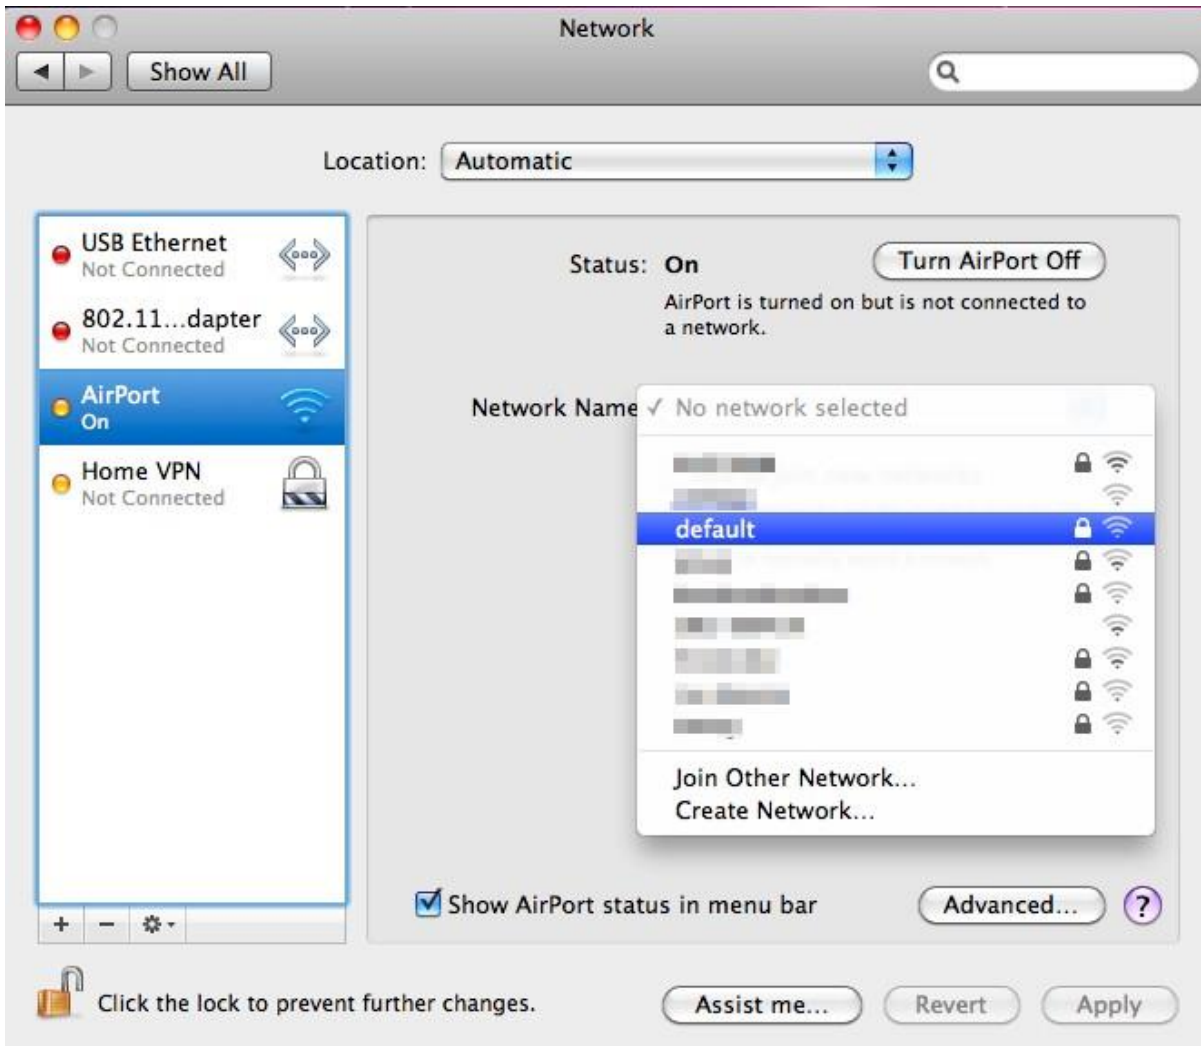

Figure 6-15 System Preferences -- Network

**Step 3:** Check Wi-Fi setting and select the available wireless network

- (1) Choose the **AirPort** on the left-menu (make sure it is ON)
- (2) Select Network Name [**default**] here

If this is the first time to connect to the Wireless AP, it should show "Not network selected".

**Figure 6-16** Selecting the Wireless Network

## 6.4 iPhone/iPod Touch/iPad

In the following sections, the **default SSID** of the AirMax5X II is configured to “**default**”.

**Step 1:** Tap the [Settings] icon displayed in the home screen

Figure 6-17 iPhone – Settings icon

**Step 2:** Check Wi-Fi setting and select the available wireless network

- (1) Tap [General] \ [Network]
- (2) Tap [Wi-Fi]

If this is the first time to connect to the Wireless AP, it should show “Not Connected”.

Figure 6-18 Wi-Fi Setting

Figure 6-19 Wi-Fi Setting – Not Connected

**Step 3:** Tap the target wireless network (SSID) in “Choose a Network...”

- (1) Turn on Wi-Fi by tapping “Wi-Fi”
- (2) Select SSID [default]

Figure 6-20 Turning on Wi-Fi

**Step 4:** Enter the **encryption key** of the Wireless AP

- (1) The password input screen will be displayed
- (2) Enter the encryption key that is configured
- (3) Tap the **[Join]** button

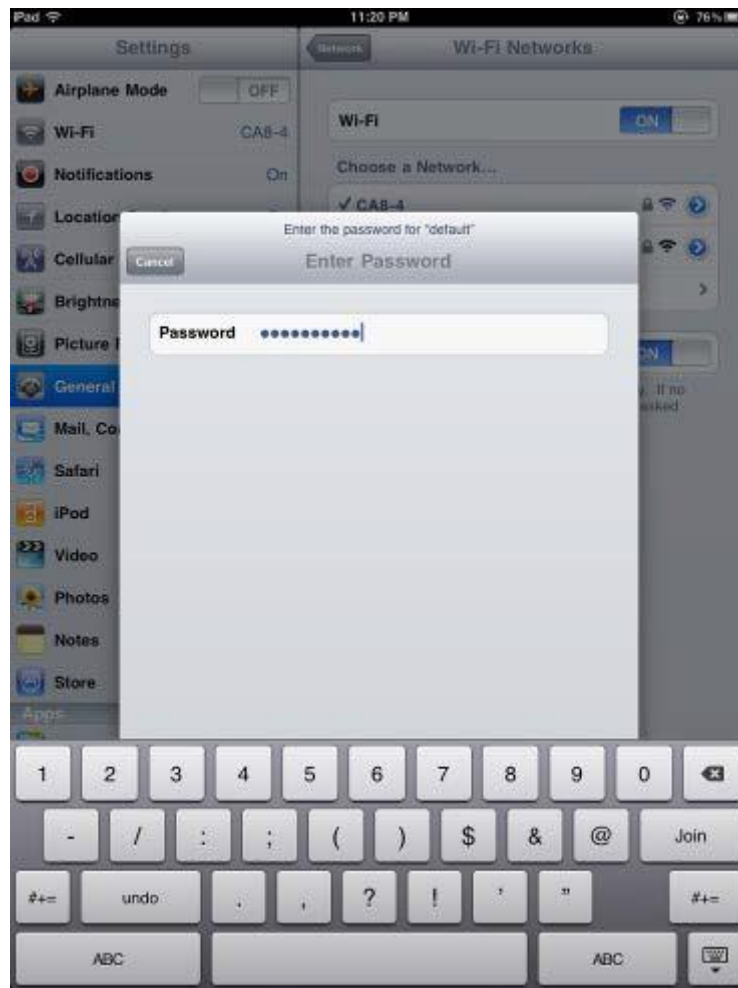

Figure 6-21 iPhone -- Entering the Password

**Step 5:** Check if the device is connected to the selected wireless network.

If "Yes", then there will be a "check" symbol in front of the SSID.

Figure 6-22 iPhone -- Connected to the Network

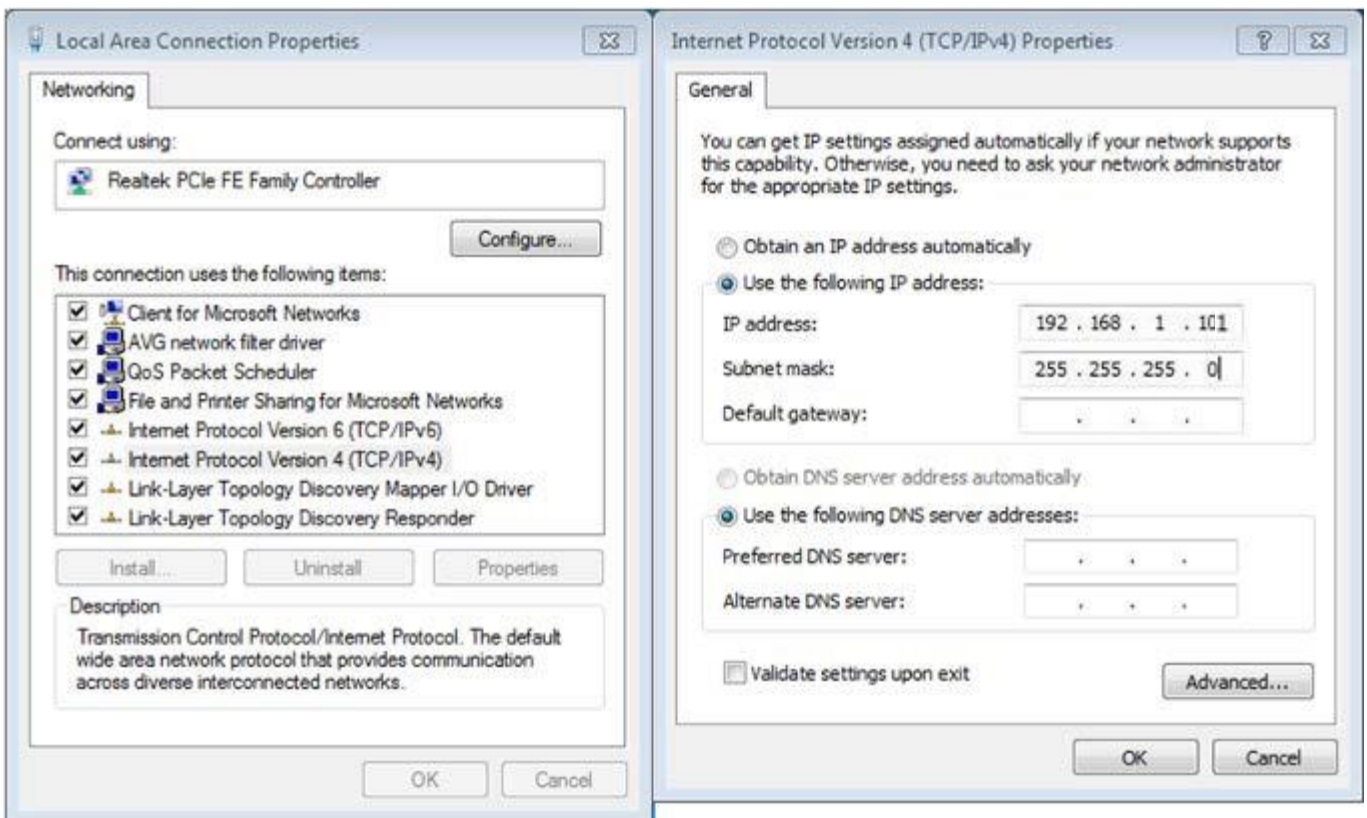

# Appendix A: FAQs

## Q1: How to set up the AP Client Connection

### Topology:

**Step1.** Use static IP in the PCs that are connected with AP-1(Site-1) and AP-2(Site-2). In this case, Site-1 is "192.168.1.101", and Site-2 is "192.168.1.200".

**Step2.** In AP-2, change the PtP switch to slave, the default IP is **192.168.1.100**.

**Step 3.** In AP-1, go to “**Wizard**” to configure it to **AP Mode**. In AP-2, configure it to **Repeater Mode**.

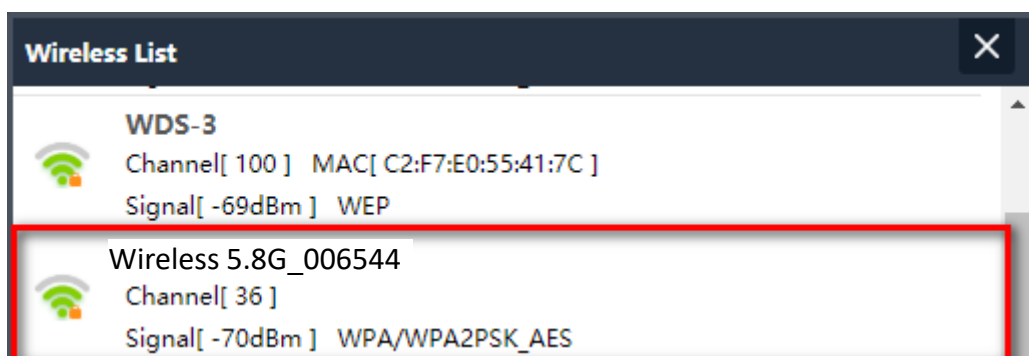

AP-1

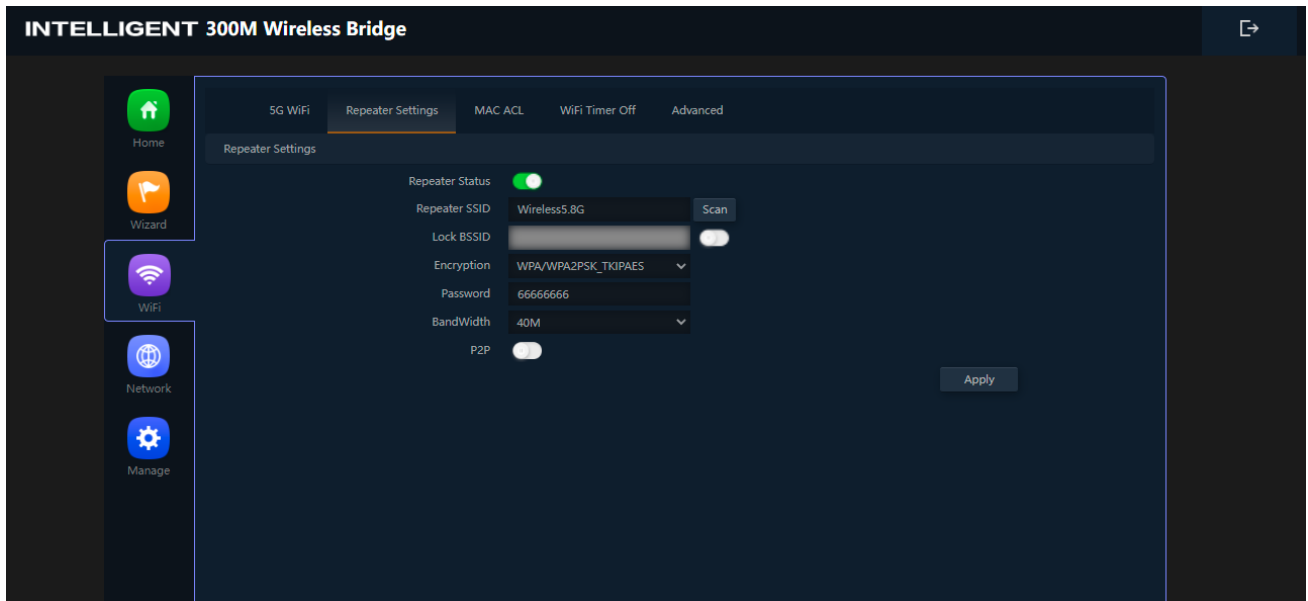

AP-2

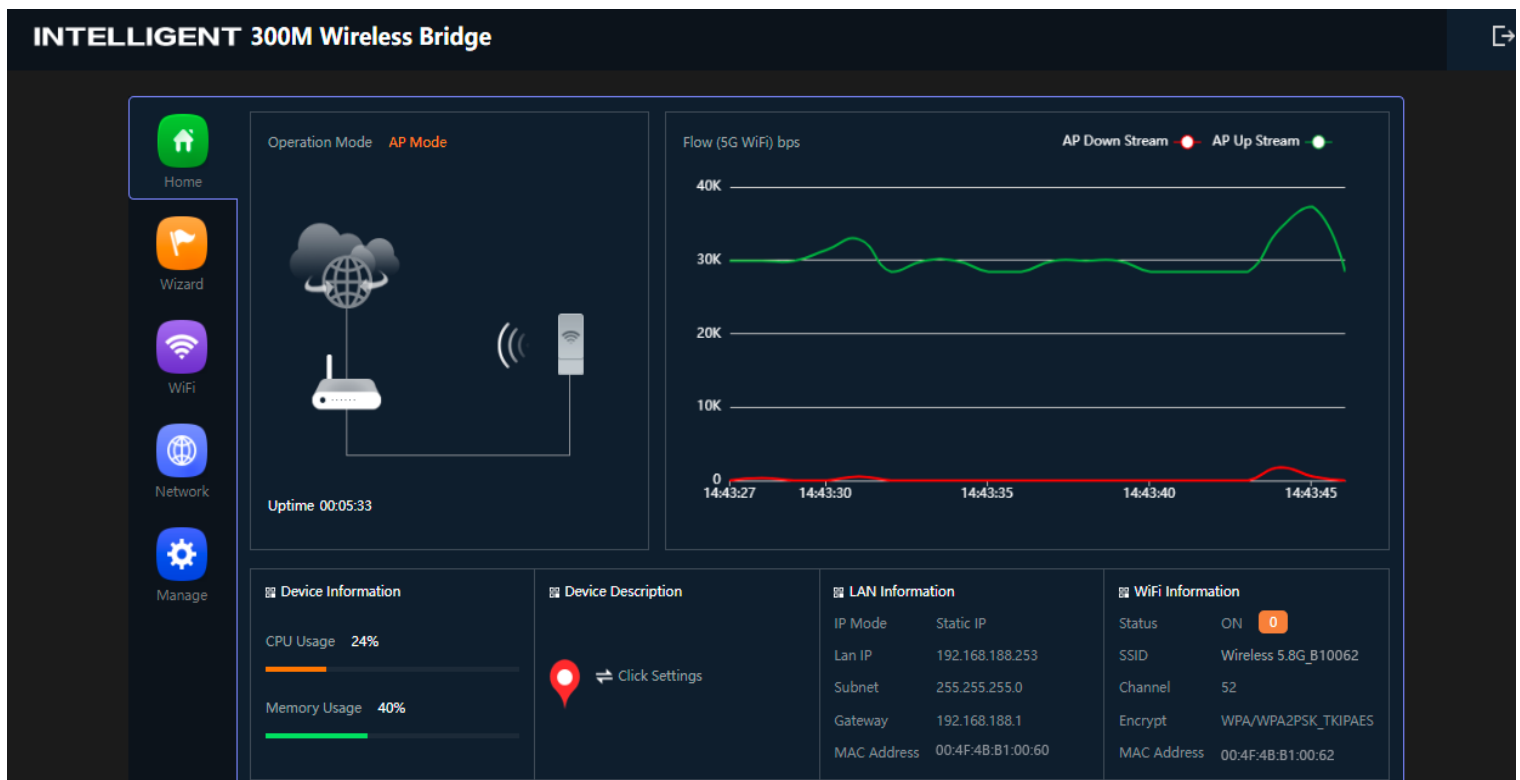

**Step 4.** In AP-2, press **Scan AP** to search the AP-1. You can also enter the MAC address, SSID, encryption and bandwidth if you know what they are.

**Step 5.** Click “Next” to finish the setting. ( The default Password is ”12345678” )

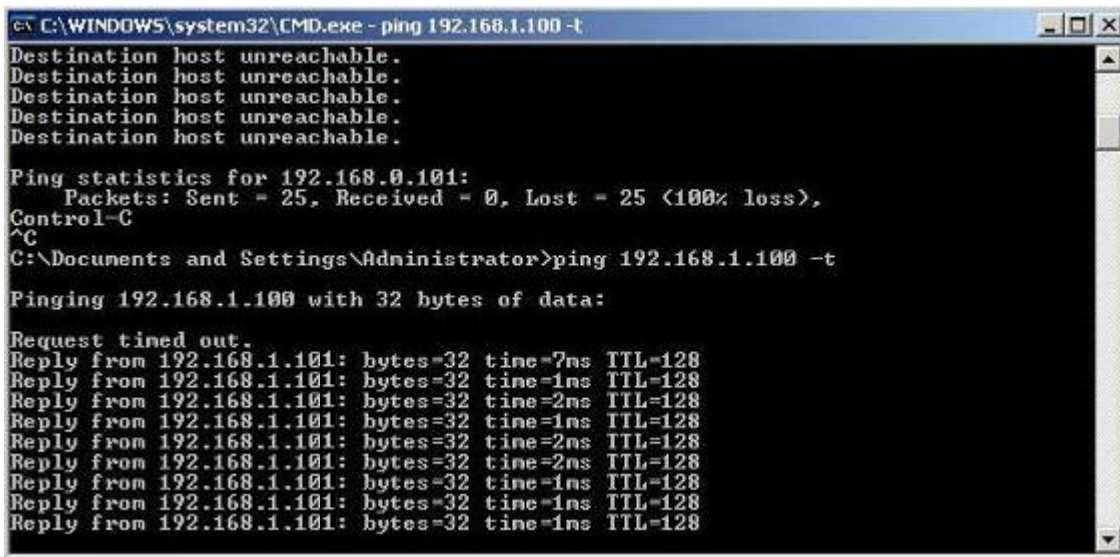

**Step 6.** Click “Device Status” to check connection status.

**Step 7.** Use command line tool to ping each other to ensure the link is successfully established.

From Site-1, ping 192.168.1.200; and in Site-2, ping 192.168.1.101.

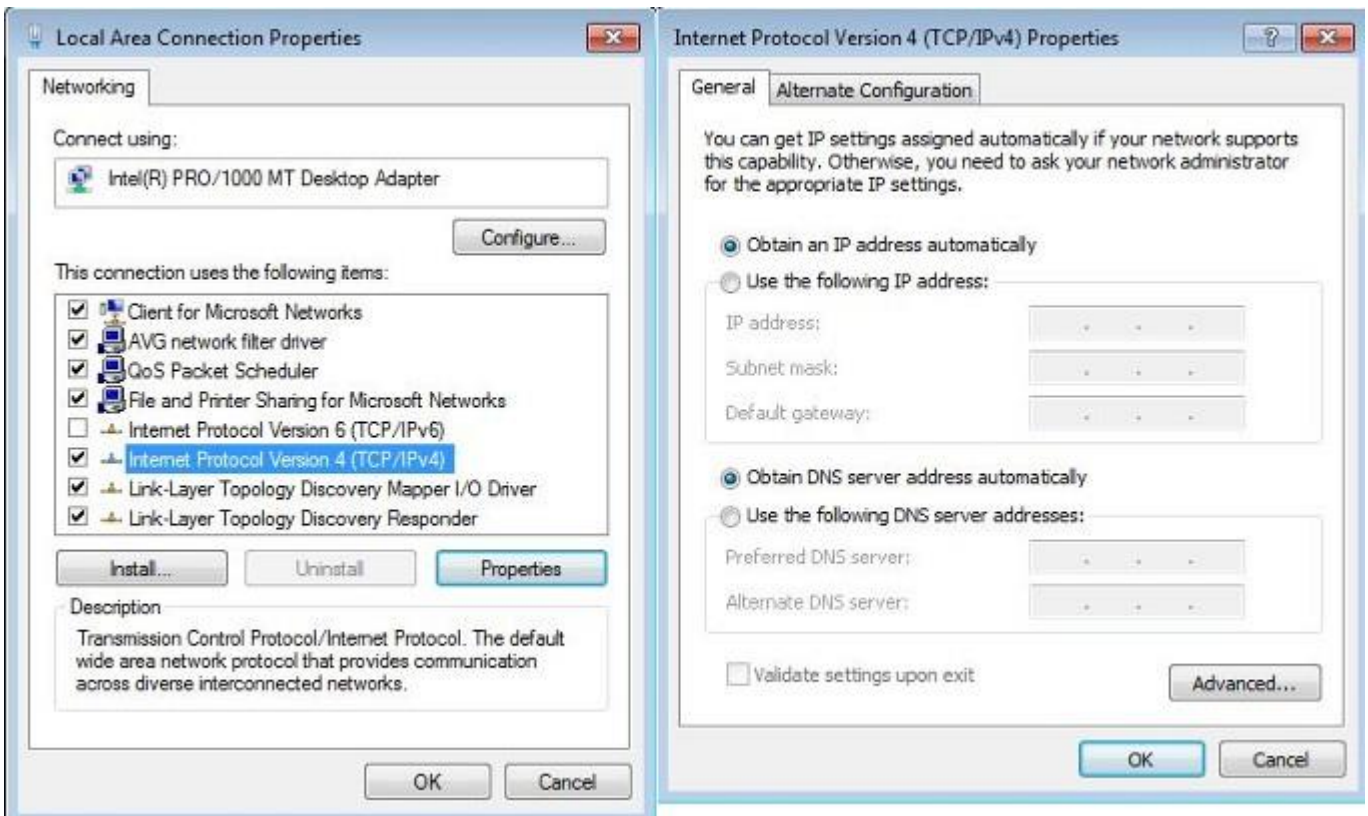

```
C:\WINDOWS\system32\CMD.exe - ping 192.168.1.100 -t
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

Ping statistics for 192.168.0.101:
    Packets: Sent = 25, Received = 0, Lost = 25 (100% loss),
Control-C
^C
C:\Documents and Settings\Administrator>ping 192.168.1.100 -t

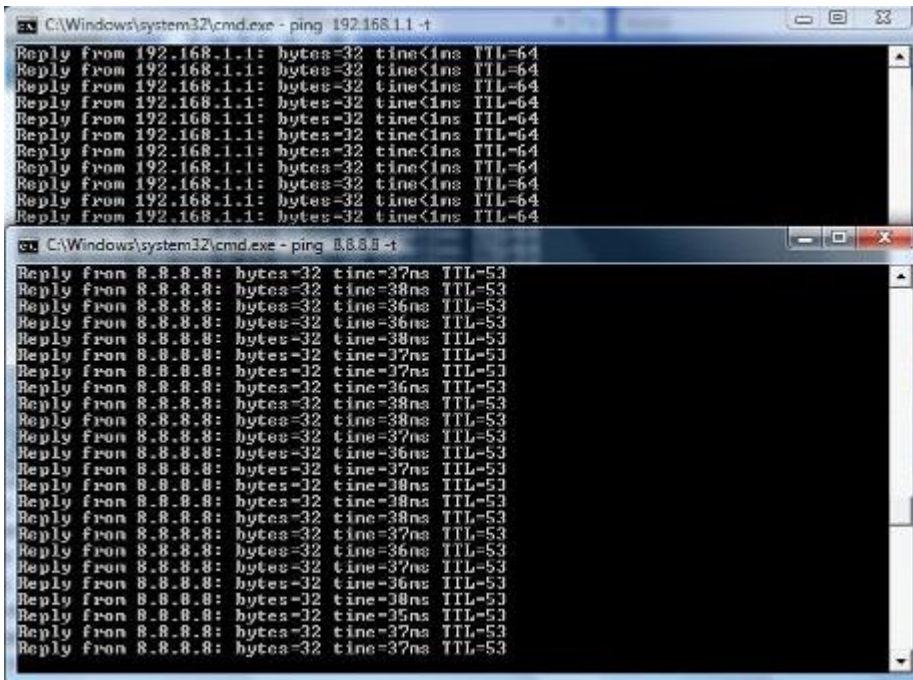

Pinging 192.168.1.100 with 32 bytes of data:

Request timed out.
Reply from 192.168.1.101: bytes=32 time=7ms TTL=128
Reply from 192.168.1.101: bytes=32 time=1ms TTL=128
Reply from 192.168.1.101: bytes=32 time=2ms TTL=128
Reply from 192.168.1.101: bytes=32 time=1ms TTL=128
Reply from 192.168.1.101: bytes=32 time=2ms TTL=128
Reply from 192.168.1.101: bytes=32 time=2ms TTL=128
Reply from 192.168.1.101: bytes=32 time=1ms TTL=128
Reply from 192.168.1.101: bytes=32 time=1ms TTL=128

```

The following hints should be noted:

- 1) The encryption method must be the same as that of both sites if configured.
- 2) Both sites should be Line-of-Sight.
- 3) For the short distance connection less than 1km, please reduce the "RF Output Power" of both sites.
- 4) For the long-distance connection over 1km, please adjust the "Distance" to the actual distance or double the actual distance.
